DECLARATION

I hereby declare that the Integrated Research Project titled **"An Analytical Study of SoLoMo Commerce in Fashion Retailing: An Application of the SOR Framework"** is an authentic record of the research work carried out by me under the guidance of Dr. S Suresh, faculty at Jaypee Business School.

I affirm that this project is a result of my own efforts and reflects my understanding of the subject matter. The analysis, interpretations, and conclusions presented in this report are based on data collected and processed by me during the course of this study. I have maintained the highest standards of academic integrity and have ensured that no part of this report is reproduced from any other source without proper citation and acknowledgment.

I further declare that this work has not been previously submitted, in part or in full, to any other university or institution for the award of any degree, diploma, or professional certificate. All secondary data and references used in this research have been duly credited in the bibliography section.

I take full responsibility for the authenticity of the information and the accuracy of the findings presented in this document.

ACKNOWLEDGEMENT

I would like to take this opportunity to express my sincere gratitude to everyone who has contributed to the successful completion of this Integrated Research Project (IRP).

I am deeply indebted to my faculty mentor, Dr. S Suresh, for his invaluable guidance, constant encouragement, and expert insights throughout the duration of this research. His patience and constructive feedback were instrumental in shaping the analytical framework and ensuring the academic quality of this study.

I also extend my thanks to the Jaypee Business School (JBS) and the entire BBA Department for providing the necessary resources and an environment conducive to learning and research.

A special word of appreciation goes to my family and peers for their unwavering support and motivation during this project. Their belief in my efforts has been a constant source of inspiration.

Lastly, I am grateful to all the respondents who participated in the survey. Their time and honest feedback provided the essential data that forms the core of this research.

TABLE OF CONTENT

CHAPTER 1 – INTRODUCTION
1.1 Foundational Overview of Retail & SoLoMo

CHAPTER 2 – SCOPE AND OBJECTIVE

2.1 Research Boundaries and strategic scope

CHAPTER 3 – LITERATURE REVIEW

3.1 Evolutionary trends : A Review of Literature

CHAPTER 4 – RESEARCH METHODOLOGY
4.1 Methodology Framework : The Research approach
4.2 Theoretical Underpinnings & Philosophy
4.3 Research design
4.4 Mechanism for data Acquisition
    4.4.1 Types of Data
    4.4.2Methods of Data Collection
4.5 Problems arised

CHAPTER 5 – DATA ANALYSIS & INTERPRETATION
5.1 Segmenting the Audience : Demographic Insights
5.2 Social media usage pattern
5.3 Analyzing customer dynamics in SoLoMo Ecosystem
5.4 Social media usage pattern
5.5 Core Analytical Findings & Interpretations
5.6 Post purchase behavior
5.7 Overall Impact

CHAPTER 6 – FINDINGS, CONCLUSIONS & RECOMMENDATIONS

6.1 Empirical Results
6.2 Conclusion
6.3 Recommendations

CHAPTER 7 – LIMITATIONS AND SCOPE OF FUTURE RESEARCH

7.1 Limitation
7.2 Future Research Directions

Bibliography & appendix – Questionnaire

CHAPTER 1 – INTRODUCTION

1.0 Introduction:

The fashion retail space is at a juncture where it is witnessing a tectonic shift away from the traditional storefront retail model towards a highly integrated model that is based around the lifestyle of the modern consumer. Never have we seen a time where smartphone penetration is at an all-time high, thereby changing the way consumers are being influenced by fashion brands in a manner that is unprecedented. We are no longer seeing a linear model of consumerism but are instead witnessing the advent of a "Phygital" world where the lines between physical retail and digital interaction have become blurred completely. This has given birth to a new paradigm, thereby making it necessary to conduct AN ANALYTICAL STUDY OF SOLOMO COMMERCE IN FASHION RETAILING: AN APPLICATION OF THE SOR FRAMEWORK. This convergence of social media influence (Social), geographical location (Local), and the ease of use of a smartphone (Mobile) creates a highly personalized consumer shopping experience. For a fashion brand, it is no longer necessary to simply have a website but to comprehend the manner in which the social feed of a consumer (Social) impacts them, the manner in which their location (Local) impacts them, and the manner in which the entire transactional experience can be made seamless on a 6-inch screen (Mobile). In order to properly comprehend this intricate association, this current study seeks to apply the Stimulus-Organism-Response (SOR) model in analyzing this association between these digital triggers and their effect on the shopper's cognitive and emotional states, culminating in a final purchasing decision or brand loyalty. This current research seeks to provide a comprehensive examination of this association in redefining modern-day fashion retailing with Gen Z and Millennial consumers' demands for immediacy, relevance, and social validation in every purchasing decision they make. In this increasingly competitive environment, the synergy between SoLoMo and the SOR model can no longer be taken as an academic exercise but a critical guide for any business seeking to survive and thrive in this digital economy; hence, AN ANALYTICAL STUDY OF SOLOMO COMMERCE IN FASHION RETAILING: AN APPLICATION OF THE SOR FRAMEWORK can be said to be highly relevant to both industry and academic circles.

1.1 Research Topic:

The essence of this study is centered around the following: "AN ANALYTICAL STUDY OF SOLOMO COMMERCE IN FASHION RETAILING: AN APPLICATION OF THE SOR FRAMEWORK," with a particular emphasis on the manner in which the integration of social media, local positioning, and mobile technology is revolutionizing the manner in which consumers behave. In the modern digital age, fashion retailers do not merely sell products; they compete for "micro-moments" of a consumer's attention. By employing the Stimulus-Organism-Response (SOR) framework, the study aims to investigate the manner in which stimuli, such as digital marketing via Instagram ads, geo-fenced mobile notifications, or social coupons, ultimately trigger a psychological and emotional shift in the consumer. In a crowded marketplace like the fashion retail space, the interrelation of social media, local positioning, and mobile technology is vital because it enables the retailer to bridge the gap between online consumer engagement and offline store traffic. Thus, the fundamental aim of the study is to provide a data-driven analysis of the manner in which the interrelation of the three pillars of SoLoMo creates a high-conversion environment. In this context, "AN ANALYTICAL STUDY OF SOLOMO COMMERCE IN FASHION RETAILING: AN APPLICATION OF THE SOR FRAMEWORK" becomes a vital study of the future of "Phygital" retail strategies.

CHAPTER 2 – SCOPE AND OBJECTIVE

2.0 Scope of the study:

The research is particularly focused towards understanding the growing trend of Social, Local, and Mobile commerce, as it is being applied to the fashion retail market. The major objective is to understand the perception of contemporary consumers living in the Delhi NCR region, which includes major cities such as Delhi, Noida, and Ghaziabad. As a research scholar, I have decided to work on this particular domain because it is a combination of three growing sectors, namely, digital marketing, consumer psychological behavior, and mobile technology.

2.1 Geographical Scope:

The study is specifically confined to the National Capital Region (NCR), i.e., Delhi, Noida, and Ghaziabad.

Delhi: This location will be chosen as it is the center of all trends, including fashion, with a mix of high street brands as well as online consumers.

Noida: This location will be chosen as it has a huge population of young corporate working individuals as well as students (like at JBS), who are highly mobile app-dependent for fashion.

Ghaziabad: This location will be chosen as it represents the emerging market, where traditional retail is being replaced by social media commerce.

2.2 Industrial Scope:

The study is specific only to the fashion retail segment, which includes apparel, footwear, accessories, and beauty products. Some examples of online platforms that fall under the SoLoMo segment include online fashion and lifestyle brands like Myntra, H&M, Zara, etc.

The study does not extend to non-fashion products like electronics, groceries, etc. This is because the nature of consumer motivation and the level of emotional engagement with the consumer is very different in the context of the fashion segment.

2.3 Conceptual Scope:

Conceptually, the purpose of this research is to examine the influence of social engagement, targeting, and mobile's convenience effects on the consumer decision-making process. To achieve this purpose, I will employ the Stimulus-Organism-Response (SOR) model of consumer behavior, in which:

The external environment, including social interaction, brand prestige, practicality, and information availability, serves as the stimulus.The consumer's internal feelings and perceptions, including hedonic and utilitarian values, serve as the organism.The consumer's purchase intention serves as the response.This conceptual model not only helps explain why consumers engage in SoLoMo shopping but also helps explain what drives them to do so.

2.4 Demographic Scope:

The target population of the study would be young and middle-aged consumers ranging from 18 years of age to 45 years of age living in Delhi, Noida, and Ghaziabad, who regularly shop for fashion and lifestyle products through mobile application-based shopping and social media platforms.

The sample population would comprise college students, working professionals, homemakers, and individuals from different age groups who have access to a smartphone device and actively use social media platforms like Instagram, Facebook, and shopping application-based platforms for shopping.

2.5 Temporal Scope:

The study is done from 2025 to 2026. This is a time when the Indian retail sector is changing quickly because of digital technology. During this time people are starting to shop in a way. They look at things check prices on their phone and then they often go to the store to see the products in person before they buy them online. The Indian retail sector is going through a change. The results of the study will show what people think about shopping during this time of change, in the retail sector.

2.6 Practical Scope:

This research is useful for many people:

- Fashion retailers and marketers can learn how to make ads that're more tailored to individual customers and target people in specific areas.

- Mobile app developers should focus on making apps that're easy to use let people interact with each other and use features based on where they are.

- Researchers and students can learn more about how people shop on their phones and the internet and how they make buying decisions.

- As a consumer you can understand how digital ads affect the things you buy.

- For consumers these findings help them see how marketing strategies, on platforms influence their purchasing decisions.

2.7 Academic Scope:

Academically this study is based on ideas, about how people behave as consumers, how marketing works and how people adopt technology.These ideas are connected using the SOR framework.This helps us understand SoLoMo in fashion in an organized way.It also helps fix a problem in research where technological marketing models and peoples experiences as consumers are usually studied apart.The study looks at SoLoMo in fashion. Tries to combine these two areas of research.This can give us an understanding of how SoLoMo works in the fashion industry.

2.8 Limitations:

The study looks at people from three cities in the NCR area.. It does not look at people from rural areas or small towns. SoLoMo may be used differently in these places. The study also only looks at what consumers think about SoLoMo. It does not look at how money SoLoMo makes or how the SoLoMo tools are designed. Maybe other researchers can look at SoLoMo in places or in other industries, like hotels or electronics. This can help us compare what we found out about SoLoMo.

2.9 Objectives:

My research is about SoLoMo and how it affects the way people shop for clothes. SoLoMo is a part of my research. I want to see how SoLoMo influences the shopping experience of people who buy fashion and how it affects their decision to buy something

The specific things I want to find out are:

1. How peoples lifestyle affects what they value when they shop. This includes things like what kind of person they're how they look for information how they interact with others if they care about brand names and if they like things that are practical. SoLoMo is important in this part of my research.
2. How the fun and useful parts of shopping on SoLoMo affect peoples decisions to buy clothes on these platforms. SoLoMo is a part of this.
3. What makes people want to engage with fashion companies on SoLoMo. I want to find out what SoLoMo does to make people want to participate.
4. I want to help fashion companies make SoLoMo marketing plans so they can connect with their customers and make them happy. SoLoMo is very important, for this.

CHAPTER 3 – LITERATURE REVIEW

3.1 Understanding SoLoMo Commerce:

The idea of SoLoMo started when companies figured out that they could use media, mobile phones and local marketing together to make things more personal for their customers. SoLoMo is when people interact with brands on media using their phones location to get relevant offers.

For example you might get a message on your phone from a fashion store near you that is having a sale. That can make you want to go shopping right away. This way companies can stay in touch with their customers all the time by using messages and real-life situations.

SoLoMo is really useful in the fashion business where things change fast. It helps companies keep their customers interested and informed about clothes, sales or events at stores near them.. When I looked at what people have written about this I found out that even though companies are using SoLoMo there is not much research on how customers feel about these SoLoMo strategies, in the fashion business.

3.2 Theoretical Framework: Stimulus–Organism–Response (SOR) Model:

The idea of SoLoMo started when companies figured out that they could use media, mobile phones and local marketing together to make things more personal for their customers. SoLoMo is when people interact with brands on media using their phones location to get offers from these brands.

For example you might get a message on your phone from a fashion store near you that is having a sale. That can make you want to go shopping away. This way companies can stay in touch with their customers all the time by using messages and real-life situations. SoLoMo is really useful for companies to reach their customers.

SoLoMo is really useful in the fashion business where things change fast. SoLoMo helps companies keep their customers interested and informed about clothes, sales or events at stores near them. I looked at what people have written about SoLoMo. I found out that even though companies are using SoLoMo there is not much research on how customers feel about these SoLoMo strategies, in the fashion business.

3.3 Fashion Lifestyle and Consumer Behaviour:

Fashion shopping is really connected to the way people live their lives. Some researchers like Ko and his team said that lifestyle is about what people like, what they think and what they believe in and that is what makes them buy things in a way. In my study I am looking at five things that affect how people buy fashion items when they use their mobile phones and social media:

* Personality. People who like to try new things and express themselves are usually the first ones to follow new fashion trends and use new technologies.

* Looking for information. These days people use their phones and computers to find out about things before they buy them they read reviews. Listen to what other people say about fashion items.

* What people think of a brand. A lot of people think that the brands they wear say something about who they're how cool they are so they care about what other people think of those brands.

* Being practical. Some people just want clothes that're comfortable and work well they do not care so much about following the latest trends

* Talking to people. Now that social media is such a big part of our lives people are getting ideas, about what to wear from their friends and other people they talk to online.

All these things together affect how people feel about shopping whether they think it is something they have to do or something fun to do and that affects how they use their mobile phones and social media to buy fashion items.

3.4 Hedonic and Utilitarian Shopping Values:

People who study how consumers behave have found that there are two kinds of value that make people decide to shop. Hedonic value and utilitarian value.

* Hedonic value is the feeling you get from shopping. It is the fun and excitement of finding and buying new clothes.

* Utilitarian value is about getting something that's useful. Like a product that saves you time or is convenient to buy.

When people shop on their phones or computers they can get both kinds of value at the time. For example a person might have fun looking at fashion pictures on Instagram, which's hedonic value and also like that an app can deliver things quickly and make it easy to pay which is utilitarian value. Some studies, like the ones done by Kautish et al. In 2021 and Ditlevsen et al. In 2019 show that both hedonic value and utilitarian value are important when people decide to shop for clothes.

3.5 SoLoMo and the Fashion Industry:

The fashion industry is really changing a lot because of SoLoMo. Now people who sell clothes do not just sell them in stores or on websites. They use media, mobile phones and information about where you are to make sure you can shop with them in many different ways.

They want to make it easy for you to buy from them no matter where you are or what you are doing.

Platforms like Nykaa, Myntra and H&M are examples of this. These fashion brands send messages to your phone to tell you about things that are happening in their stores near you or about special deals that famous people are promoting or about big sales that are happening for a short time.

By letting you share things on media and use their mobile apps they are able to make shopping online and in stores feel like the same thing.However even though more and more companies are using SoLoMo we still do not really understand how people feel about using these tools or what they think about them. In the Indian fashion market.

This is a problem that needs to be solved which's why I am doing my research, on SoLoMo and the fashion industry and SoLoMo.

3.6 Research Gap:

I looked at a lot of studies that already exist. I found some things that are missing. These missing things make it clear that we need to do this research.

* There are not studies that focus on what consumers think: Most of the time researchers looked at SoLoMo technology or marketing strategies but they did not really look at what consumers think and feel especially when it comes to how they behave and what they feel.

* There is a gap in fashion: SoLoMo has been studied in things like travel or getting food delivered. Not many people have looked at it when it comes to fashion retailing, which is an area where people get really emotional and care about what is trendy.

* We do not know much about consumers: There is not a lot of research about people who live in India even though the fashion retail sector in India is getting bigger really fast and people, in India are always using digital platforms.

* The SOR model is not used much: Only a few people have used the SOR framework to understand how SoLoMo affects what consumers want to do and if they want to buy things in the fashion sector.

My research wants to fill these gaps by looking at how the way people live and what they think is valuable affects how they shop using SoLoMo in Delhi, Noida and Ghaziabad. I want to see how lifestyle factors and the values people think SoLoMo has interact to shape SoLoMo shopping behaviour among SoLoMo consumers in these places.

CHAPTER 4 - RESEARCH METHODOLOGY

The way we did our study is really important. We need to tell people how we did it how we got the information we needed and how we figured out what it all means. This is what research methodology is about. It helps people understand what we did to see how social media marketing affects what people buy.

This part of our study talks about how we went about doing our research. We will explain what we thought was the way to do it how we planned it how we got our information and the problems we had while doing it. We want to be clear about how we looked at media marketing and its impact, on what people buy.

4.1 Research Approach:

The way we did our study is really important. We need to tell people how we did our study how we got the information we needed and how we figured out what our study means. This is what our research methodology is about. Our research methodology helps people understand what we did to see how social media marketing affects what people buy.

This part of our study talks about how we went about doing our research. We will explain what we thought was the way to do our research how we planned our research how we got our information and the problems we had while doing our research. We want to be clear about how we looked at media marketing and its impact, on what people buy.

4.2 Research Philosophy:

- One way to look at this work is through positivism. It rests on seeing reality as something measurable, spotted through clear facts. Data here comes straight from people, focused on how they use social media and what they buy. Instead of personal views, it pulls in numbers and patterns seen directly. Those figures get broken down with stats, searching for links and common shapes.

- This fits the aim of the project quite closely since:
- The study deals with measurable variables like time spent on social media, trust in influencers, and purchase decisions.
- The data is collected in structured format.
- The conclusions are based on facts derived from responses.

By adopting positivism, the research maintains objectivity and reliability in findings.

4.3 Research design:

The research design used in this study is Descriptive Research Design.

Descriptive research is used when the objective is to describe characteristics, behaviours, attitudes, or patterns of a particular group. In this case, the study describes:

- How frequently consumers use Instagram, Facebook, and Threads
- What type of content influences them
- How influencers affect trust
- How reviews and emotional factors influence purchase intention

This research does not attempt to control or manipulate any variable. It simply observes and analyses the existing behaviour of consumers.

The study is cross-sectional in nature, meaning data was collected at one specific period of time. It captures consumer behaviour during the current digital marketing environment.

A structured questionnaire ensured uniformity in responses, which made comparison and statistical analysis easier.

4.4 Data Collection:

Data collection is a crucial part of the research process because the quality of data directly affects the quality of results.

For this study, data was collected from respondents residing in the NCR region. The target group included:

- Individuals aged between 18–40 years
- Active users of Instagram, Facebook, and Threads
- Students and working professionals
- Individuals who shop online

A questionnaire was created using Google Forms and distributed through social media platforms and personal networks. The online method was selected because the research topic itself is related to digital platforms, and the target audience is active online.

The questionnaire consisted of:

- Demographic questions
- Social media usage questions
- Statements based on the Stimulus–Organism–Response (S-O-R) model
- Questions related to influencers, reviews, emotions, and buying behaviour

All responses were recorded automatically in Google Forms and later exported to Microsoft Excel for analysis.

4.4.1 Types of data:

Two types of data were used in this research:

Primary Data

A fresh set of information gathered straight from participants shapes the core of this work. From those answers, built around clear questions, insights took form piece by piece.

From these insights came a clearer picture of how people truly feel about ads on social platforms. Their reactions shaped what we noticed next. What they did online gave clues beyond just words. A pattern formed through repeated actions, not surveys. Real choices told more than any comment ever could.

Secondary Data

Secondary data was collected from:

- Research journals
- Academic articles
- Online publications
- Books related to consumer behaviour and digital marketing

Secondary data was mainly used to prepare the literature review and to understand existing theories like the Stimulus–Organism–Response (S-O-R) Model.

4.4.2 Methods of data collection:

Survey Method stood as the primary approach for gathering data. Though other techniques exist, this one shaped most of the information. Its structure guided how responses were recorded. Through it, patterns began to show clearly. Focus stayed on written answers collected at once.One way to collect answers started with a clear layout on paper. Questions that needed fixed choices appeared next to ratings people could pick. This setup helped keep things simple for those replying. Each part followed a path meant to avoid confusion. Fixed options made it easier to understand what people thought.A quick way to gather people made this approach fit. Those who showed up, ready to answer, got included. Picking folks like that saved time and effort

- It is time-efficient
- It is cost-effective
- It allows quick collection of data
- It is suitable for academic research projects

Although convenience sampling may not represent the entire population perfectly, it is practical for limited-time academic research.

4.5 Problems faced:

While conducting this research, certain challenges were experienced.

- Limited Sample Size:

  Due to time and resource limitations, it was not possible to collect responses from a very large number of participants.

- Time Constraints:

  The research had to be completed within a fixed academic schedule, which limited the duration available for data collection.

- Response Bias:

  Some respondents may have selected answers casually without deep thinking. Since the questionnaire was online, responses could not be monitored personally.

- Limited Geographical Area:

  The study was confined to Delhi NCR region only. Therefore, the findings may not fully represent consumers from rural or other regions of India.

- Rapidly Changing Social Media Trends:

  Social media trends change quickly. New features, platforms, or marketing strategies may influence consumer behaviour differently in the future.

CHAPTER 5 – DATA ANALYSIS & INTERPRETATION

This part dives into what the survey answers reveal. Data came mainly from an online form shared via Google Forms. Forty people sent back their replies. They spanned various ages, genders, education levels. Each response added a separate piece to the picture forming here.

Looking into how folks act when shopping online meant checking out social networks, nearby interactions, their phones' role - all bundled as SoLoMo. Figures got broken down through graphs showing how much each answer showed up - helping spot what people lean toward or skip entirely. Patterns started appearing once numbers took shape on screen instead of staying raw data rows. Preferences stood out more clearly after sorting replies by frequency and shared traits across users' habits. Behaviours repeated often enough began forming a picture of who does what and why during buying moments. Charts made it easier to see where choices overlapped or sharply split between groups tested. Seeing percentages line up revealed which features mattered most when deciding to click purchase. Trends became visible not just in big shifts but also small steady moves across answers collected. What users did on devices matched certain triggers tied to location, friend input, or platform design quirks. Each visual told part of the story behind taps, swipes, and time spent hovering before acting.

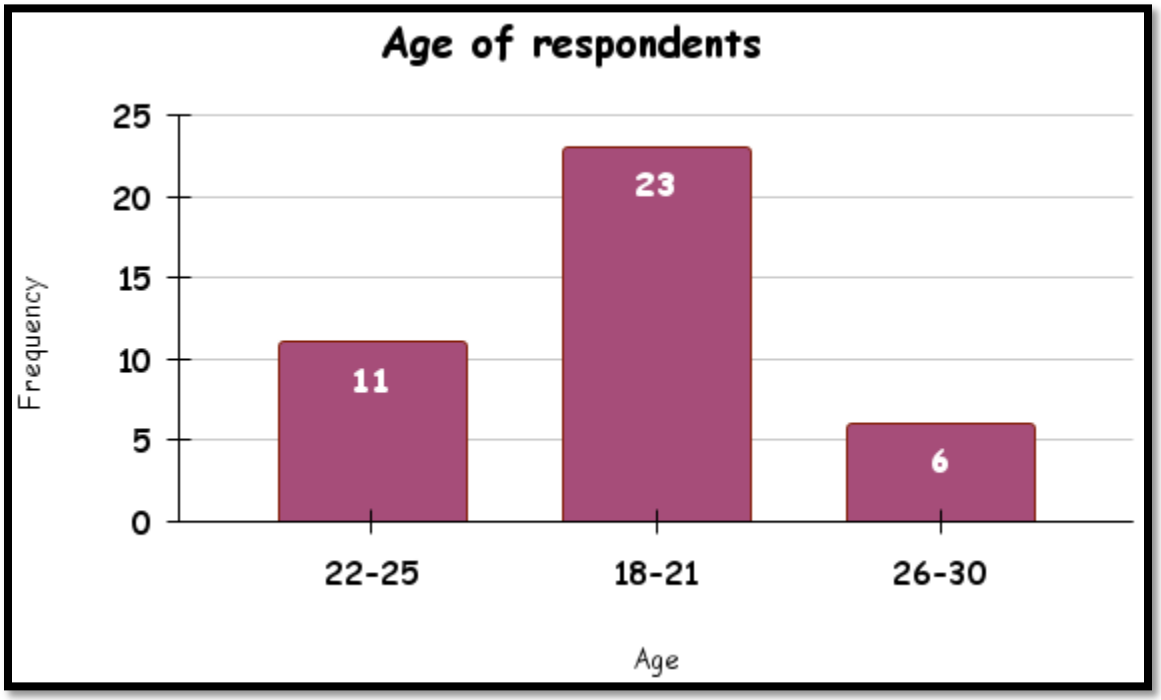
Clear links show how social media marketing shapes what people buy. Ideas unfold step by step, without clutter. Each point builds on the one before, making patterns easier to see. Understanding grows through examples, not jargon. Thoughts connect naturally, like pieces fitting together. Insight comes from flow, not force. What matters stands out, quietly.

5.1 Demographic Analysis

Picture who answers a survey - age, gender, schooling, cash flow - affects how they act as buyers. Since habits shift with these traits, spotting patterns becomes clearer. One crowd might react strongly to Instagram ads, another barely notices. Social media's pull isn't equal across the board. Details like years lived or pay after taxes shape what clicks online. A college grad under thirty may engage differently than someone older without degrees. Money in pocket changes choices too. Seeing who leans into trends helps make sense of reactions. Not everyone moves at the same rhythm when scrolling feeds. Hidden shifts show up only when slicing data this way.

- Age Group

A face behind every form - age tags along, then comes gender, time spent learning, money earned each month. Because of this mix, choices start making sense when viewed through such lenses. Some jump at posts seen on Instagram, others scroll past without pause. Not everyone feels the social wave the same way. Life stage and take-home pay quietly steer what grabs attention online. A young graduate might tap into apps unlike those seasoned by years, lacking diplomas. Cash on hand steers paths in quiet but clear ways. Watching who drifts toward new waves reveals patterns behind clicks. Pace wobbles between fingers swiping screens, never quite matching. These subtle turns surface solely through layered number work.



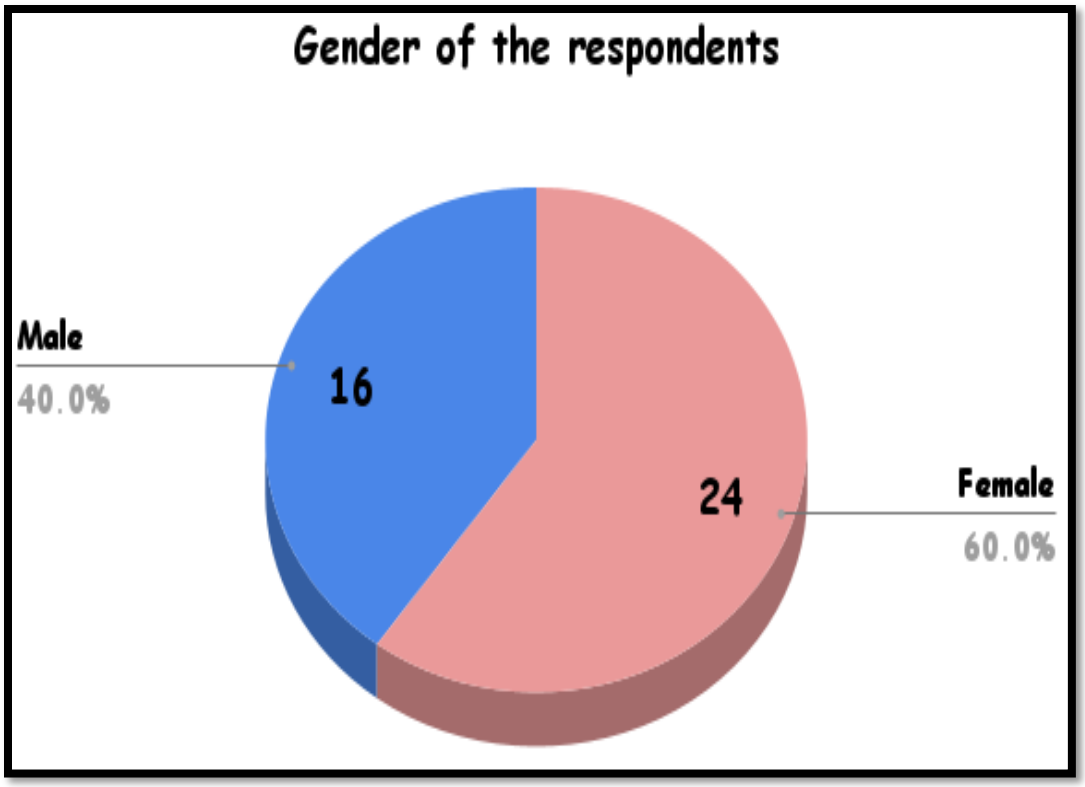
- Gender Distribution

From the data gathered, answers came in from men alongside women. Participation included individuals of different genders.

Women made up most of the people who answered, whereas men took part a bit less often. Those results suggest females engaged more when asked about how social media affects what they buy.

Females showing up more in the data might tie back to their frequent use of social media - often scrolling through feeds to spot fresh items, clothing styles, or daily living tips. Sometimes it's less about numbers, more about how they engage online, leaning into platforms where visuals and personal stories shape choices. What stands out isn't just presence, but the way these spaces become go-to spots for inspiration pulled straight from real-life moments.

Females often shape choices in fashion, beauty, life items, yet buying paths differ - social spaces matter more here. Platforms host daily routines, so attention sticks longer when messages fit how women browse, share, decide. Shopping moves fast now, trends spread through posts, stories, quick clips where trust builds quietly. Reaching them means showing up where habits live, not just pushing offers into feeds.



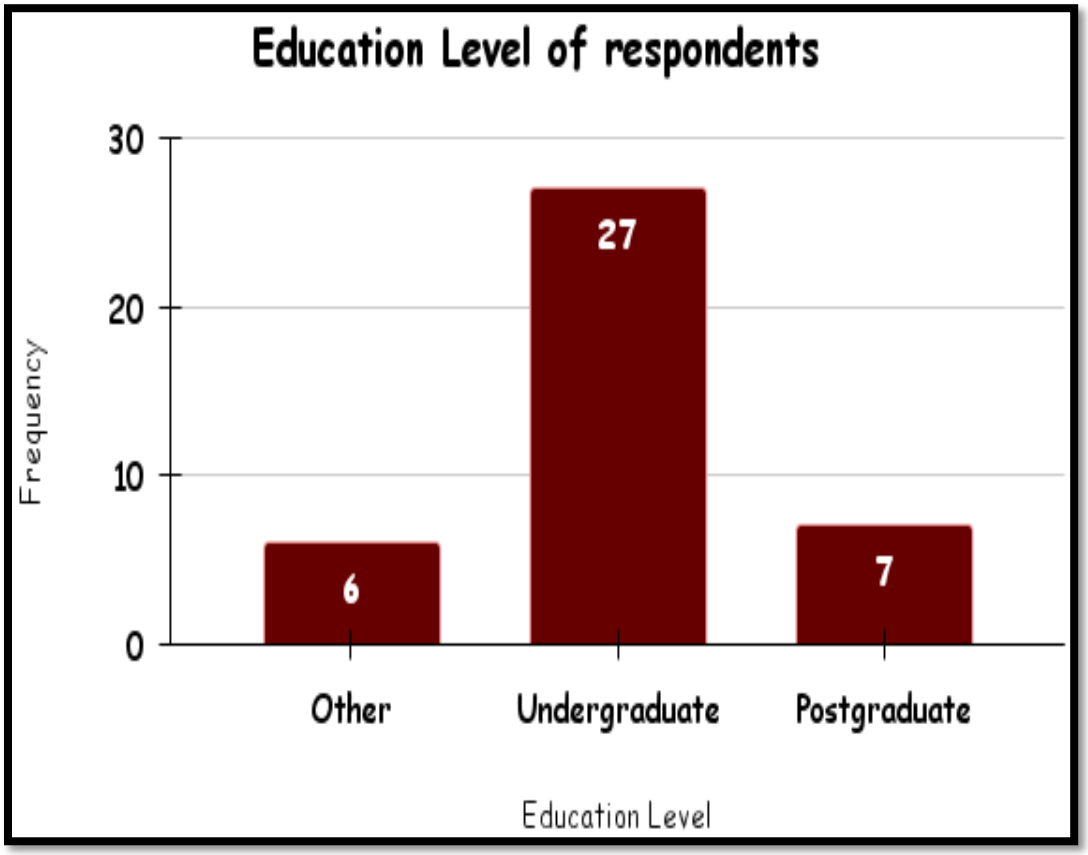
- Education Level

A few of those questioned were still studying, some had finished degrees, others went further. Education levels split across undergrads, grads, then beyond that too.

Most people who answered were studying at university, either for a first degree or higher. That makes sense because younger folks with schooling tend to join internet surveys often, plus they spend more time on digital sites.

People who study more tend to notice brands and what others say about them online, sometimes changing how they buy things. Schooling helps folks pay attention to product feedback, quietly guiding their choices later on.

People who know their stuff tend to check out options, look into what others say, then weigh details before buying something.



- Monthly Personal Income

What people earn shapes how they spend, often guiding their choices without them noticing. A

paycheck size can quietly steer decisions, making some options feel out of reach while others seem natural. Money coming in each month sets limits, even when desire does not.

Most people who answered fall into lower or middle earnings brackets. Typical for younger folks still studying or just starting out. Not surprising when you look at who usually takes part.

Even on tight budgets, people often look to social media when deciding what to buy - drawn in by trends spotted online. Scrolling feeds shapes choices more than expected. Seeing others use products makes them feel within reach. Platforms highlight items through daily exposure. What shows up repeatedly gains attention. Visual appeal matters most. Word spreads fast without ads. Friends' posts carry weight. Recommendations pop up naturally. Real-life examples stand out. Trust builds slowly through shared experiences. Familiarity grows over time. Content feels personal, not staged. Constant updates keep interest alive

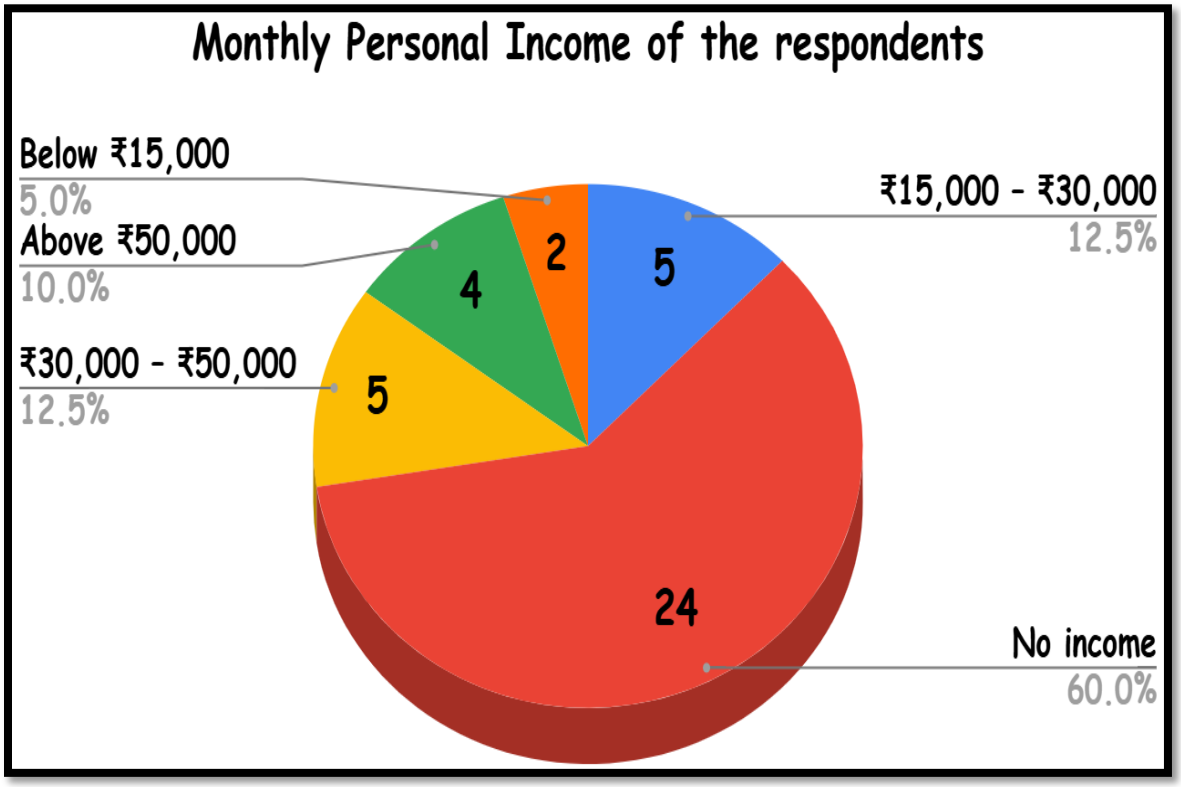
1.Discounts

2.Promotional offers

3.Influencer recommendations

4.Trending products

A look at spending habits reveals something quiet but clear - tighter budgets don't block online influence, particularly when deals feel worth it.



5.2 Social Media Usage Pattern

This section analyses how respondents use social media platforms and how frequently they interact with digital content.

Understanding social media usage helps explain how consumers are exposed to marketing messages.

- Platforms Used by Respondents

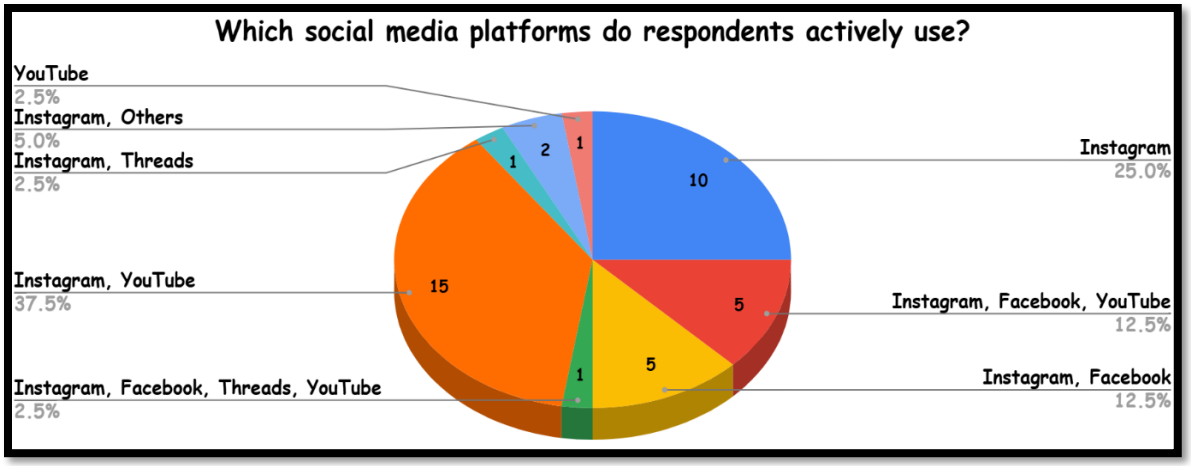
Asked what apps they spend time on, people named sites like Instagram, YouTube, Facebook. Most said they check one or more of these often.

Out there, Instagram grabs more attention than any other site, while YouTube trails close behind. Facebook? Not so much - fewer people pick it, particularly when you look at teens and young adults. Younger crowds just seem to skip past it altogether.

Something about scrolling through quick clips and snapshots keeps people coming back to Instagram. Because visuals grab attention fast, finding fresh items feels natural there. Creators share moments in real time, showing off goods without sounding like ads. When companies team up with popular accounts, their reach grows quietly. Instead of loud pitches, they lean into storytelling that fits how people already browse.

Browsing YouTube often leads people to clips showing how things work - like reviews or step-by-step guides. Because of these visuals, picking what to buy feels less confusing when choices appear clearly on screen.

Picture-heavy sites grab eyes fast, so brands often win there. When clips pull people in, messages stick better than plain words do.



- Time Spent on Social Media

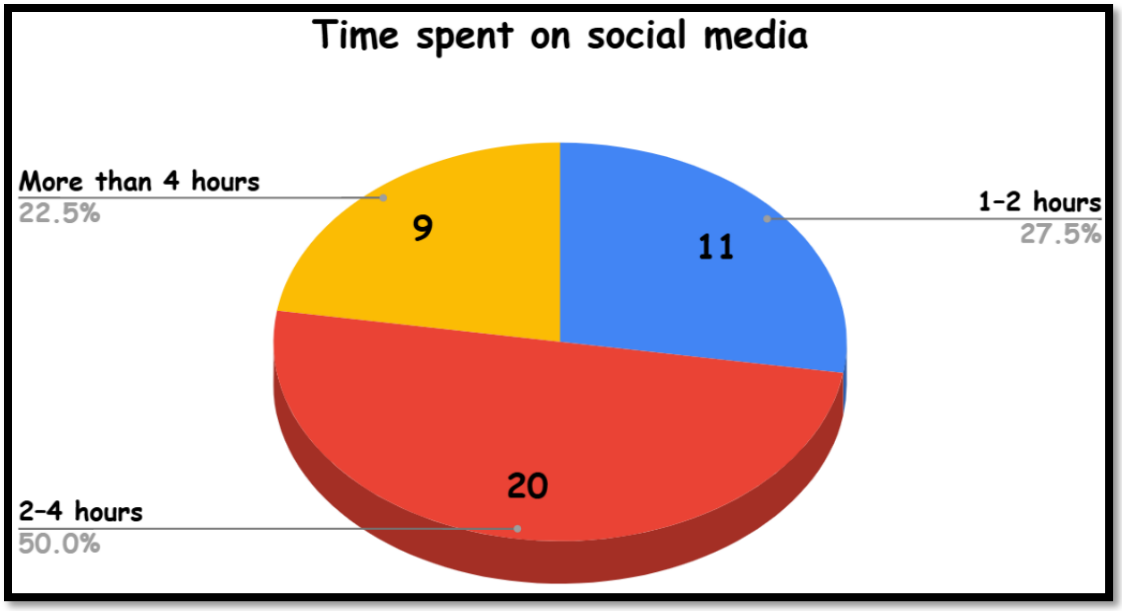
Most people in the study checked social media every day, giving a clear view of how often they see ads online. It turns out nearly everyone surveyed uses these platforms regularly.

Half of those asked - twenty people - spend two to four hours daily scrolling through social platforms. A full fifty percent fall into this range, pulled from a group of forty total answers. Most in this chunk interact often with videos, updates, ads, or content pushed by influencers. Time spent suggests steady involvement rather than occasional check-ins. Regular visits shape how they experience what appears online each day.

Some eleven people - about a quarter of those asked - use social media one to two hours every day. While scrolling through posts now and then, they often run into ads or suggestions for things to buy. Their routine check-ins make exposure to company messages almost certain.

Some folks - nine of them, which is about 22.5 percent - say they're online way more than four hours every day. These users dive deep into feeds, scrolling through endless posts and ads without pause.

One thing stands clear: many people now log over two hours each day online. That time isn't just scrolling - it shapes how they learn about brands. Seeing posts shifts what items catch their eye. Choices at checkout often trace back to something spotted earlier on screen. Attention sticks where feeds lead.



- Platform Influencing Buying Decisions

What stood out in the report? Figuring out which app sways people most when they choose what to buy. One tool clearly shaped choices more than others, standing apart from the rest. Not every network carried the same weight - some barely made a dent.

Looking at the data, it seems Instagram shapes buying choices more than other platforms. Most people said they find out about items while scrolling through posts, short videos, or sponsored content from creators. Because the system learns what users like, similar product clips keep appearing in feeds. That repeated visibility tends to guide what people decide to buy.

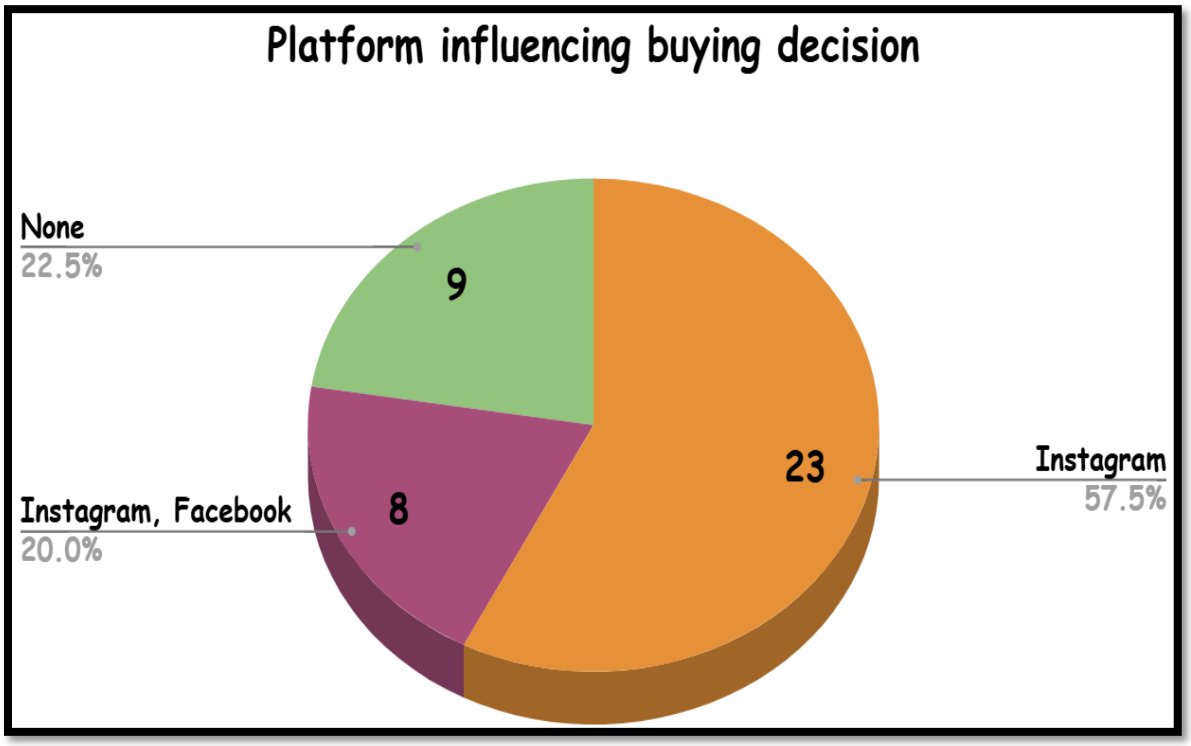
Browsing stuff online? YouTube quietly shapes what people buy - review clips, side by side looks, deep dives into how things work. When shoppers hesitate, they head there to dig deeper, see it in action, figure out if it's worth it.

Younger users aren't drawn to Facebook much these days, yet a few still check ads and company updates there now and then. Despite its fading grip on this group, occasional visits happen just

the same.

Something stands out in the data - images plus short films shape what people buy more than expected. Where users dive into clickable, lively material, choices at checkout shift noticeably. That pattern repeats across tests.

When companies put energy into places such as Instagram or YouTube, reach tends to grow while interactions with buyers often rise too.



5.3 Analysis of Consumer Behavior towards SoLoMo Commerce

- Exposure to Social Media Marketing

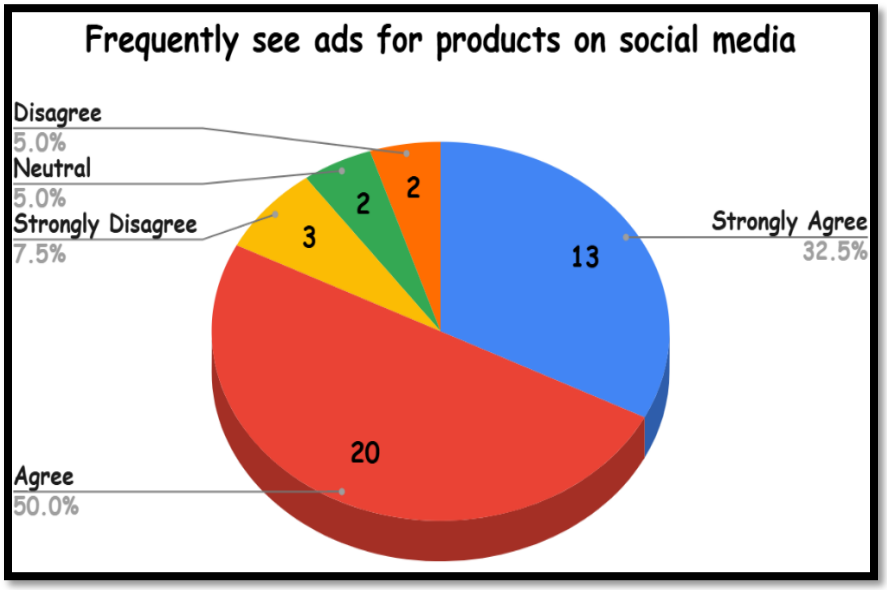
Most respondents agreed that they frequently see advertisements while browsing social media platforms.

These advertisements appear in different formats such as:

1. Sponsored posts
2. Reels
3. Influencer collaborations
4. Brand promotions

The presence of advertisements within regular content makes them appear more natural and less intrusive compared to traditional advertising methods.

As a result, consumers are more likely to notice and engage with these advertisements.

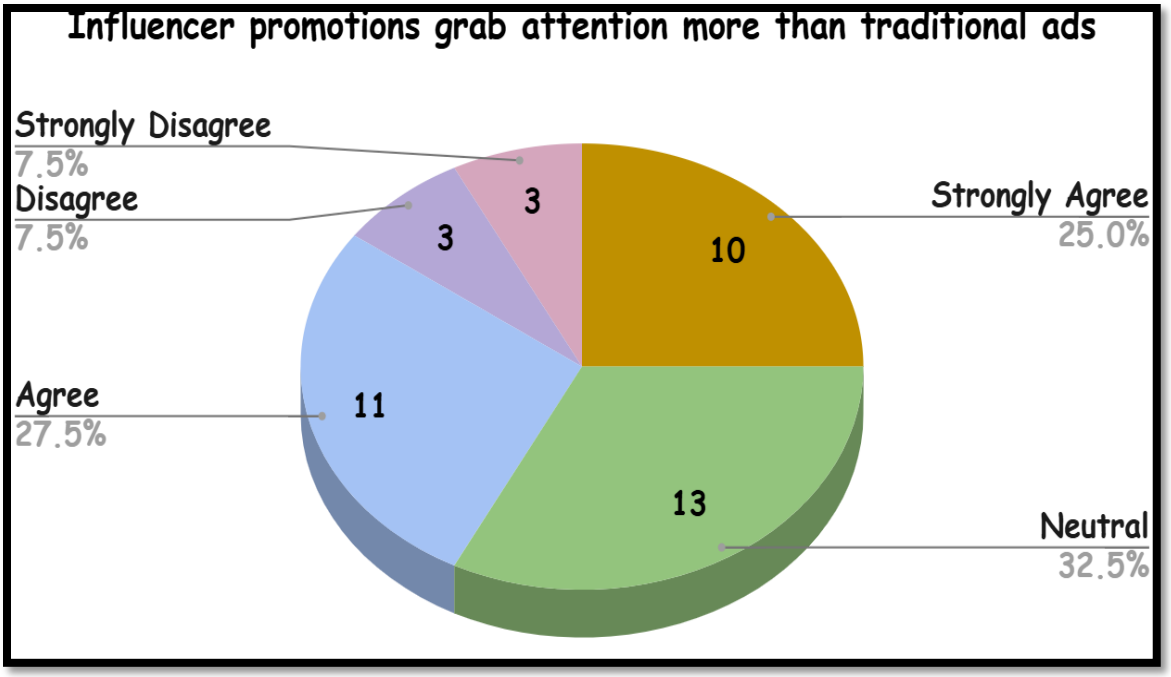


Influence of Influencer Promotions -

Looking into this meant checking how influencer posts stack up against regular ads when grabbing interest.

Eleven people - just over a quarter - said influencer ads catch their eye better than regular ones. A bit fewer, ten of them, felt that way even more strongly. Thirteen didn’t lean one way or the other when asked. Three pushed back against the idea. Another three rejected it completely.

It seems influencer marketing grabs people's notice - at least somewhat. Still, so many saying "neither agree nor disagree" hints that trust might waver. A big chunk just aren’t sure if these endorsements really work. That gap in conviction lingers even when attention is caught. Not everyone sees influencers as clear guides for choices. Doubt shows up right alongside interest. Some folks stay on the fence, watching but not convinced.



Impact of Reels and Stories -

Short-form content such as reels and stories has become extremely popular on platforms like Instagram.

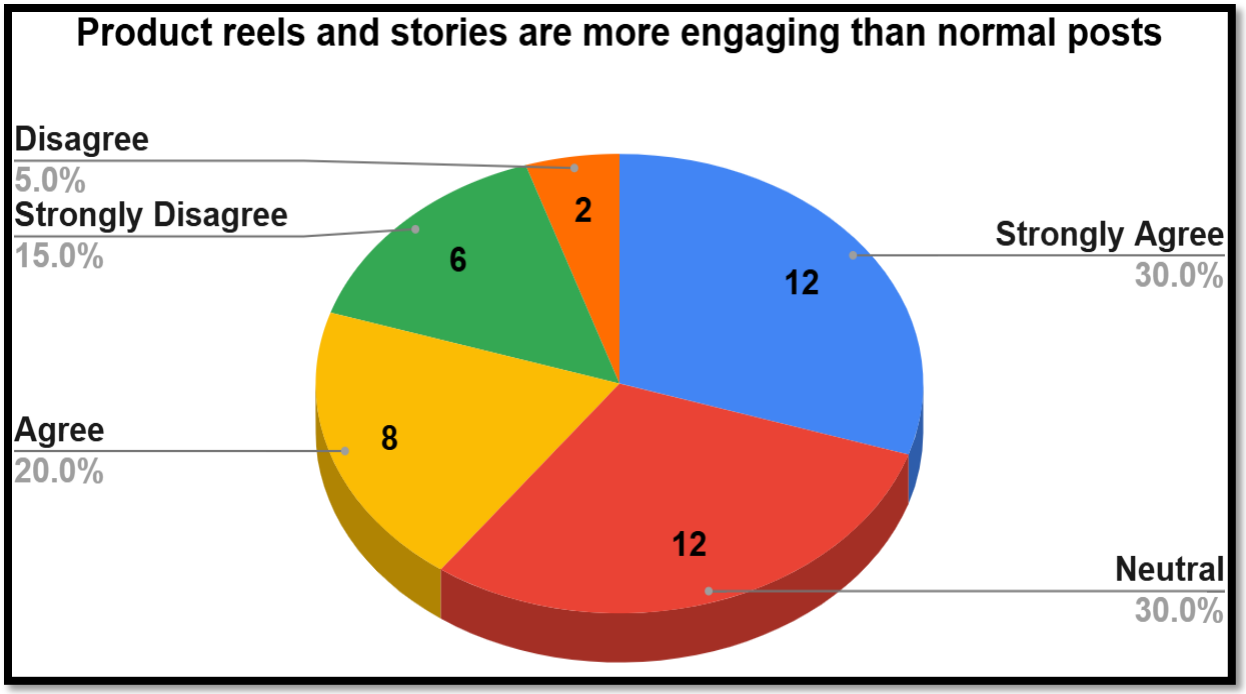
The analysis shows that respondents find product reels more engaging than traditional posts.

Reels combine:

1. Visual demonstration
2. Music
3. Storytelling
4. Product features

This format captures attention quickly and makes the product appear appealing.

For brands, reels are an effective way to present product benefits in a short and entertaining format.

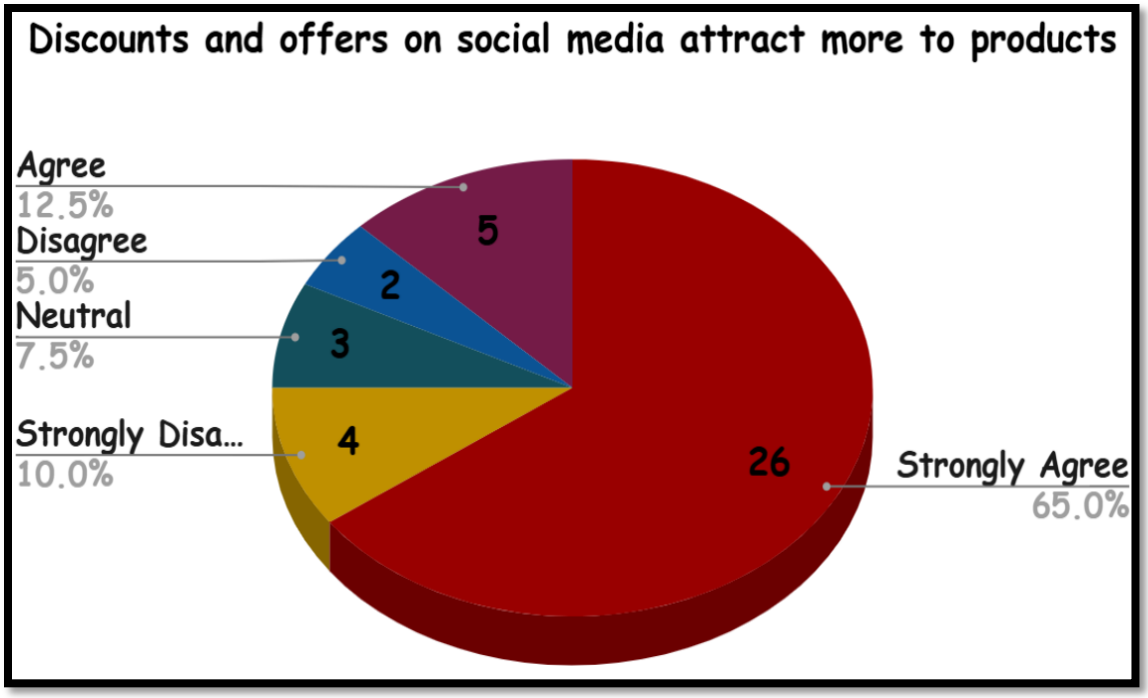


- Influence of Discounts and Offers

  The survey also examined how discounts and promotional offers influence consumer interest. Most respondents agreed that discounts and special offers promoted on social media attract them to products.

  Limited-time deals, flash sales, and coupon codes often create a sense of urgency, encouraging consumers to make quicker purchase decisions.

  This shows that promotional pricing strategies combined with social media marketing can significantly increase sales.



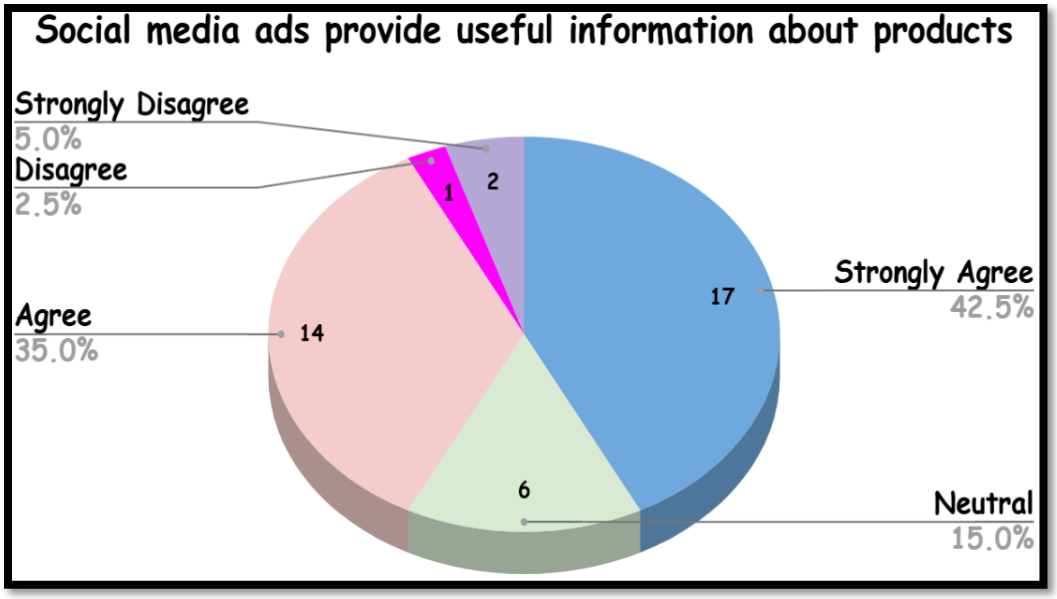
5.4 Consumer Perception and Attitude

- Usefulness of Social Media Ads

Interest didn't come just from influencers. Regular ads stepped in too, each pulling attention differently. What stood out wasn't always loud. Quiet moments often held more weight than expected.

Out of thirty people, eleven - slightly more than a fourth - noticed influencer advertisements more easily than standard ones. Even stronger agreement showed up in ten cases, though. On the flip side, thirteen stayed neutral when questioned. Resistance appeared in three individuals who disagreed mildly. Total dismissal came from another trio, firm in refusal.

Looks like influencer marketing catches eyes - kind of. Yet a swarm of neutral answers suggests faith isn't solid. Plenty remain unsure whether such pushes actually sway decisions. Even when you get attention, belief drags behind. Some folks simply do not view influencers as dependable compasses. Yet hesitation tags along wherever curiosity appears. Others linger near decisions, looking close yet never quite believing

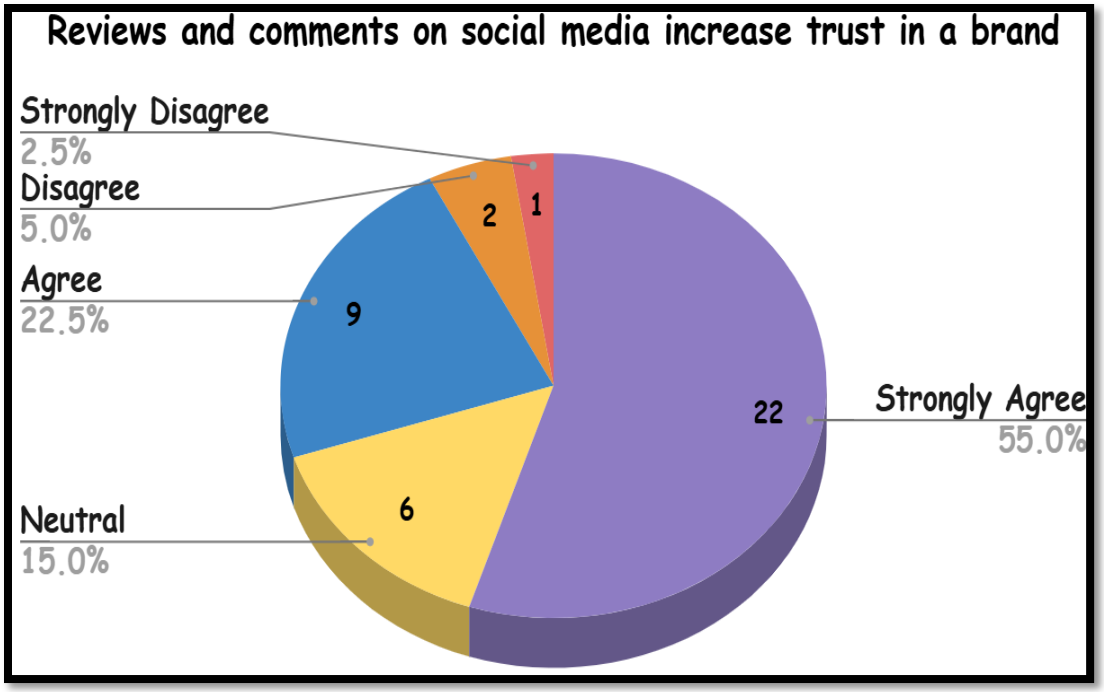


- Impact of Reviews and Comments

Curiosity showed up through more than trendsetters. Ordinary advertisements joined the mix, drawing eyes in their own ways. The loudest noise rarely caught on best. Stillness sometimes carried a deeper impact than anyone predicted.

Fewer than one in four among the thirty picked out influencer ads quicker. Eleven spotted them first, actually. Ten gave even clearer signs they saw those posts faster. Thirteen didn't lean either way when asked. Three pushed back just a little. Firm rejection? That was shared by three others exactly. A small group, but fixed in their view.

Catching eyes seems possible through influencer marketing - sort of. Still, waves of lukewarm replies hint trust hasn't taken root. Doubt lingers on whether these nudges truly change minds. Attention might arrive fast, yet conviction trails slow. For some people, influencers just don't feel like reliable guides. Hesitation follows curiosity like a shadow. Where choices stand, some hover nearby - watching, almost trusting but not quite



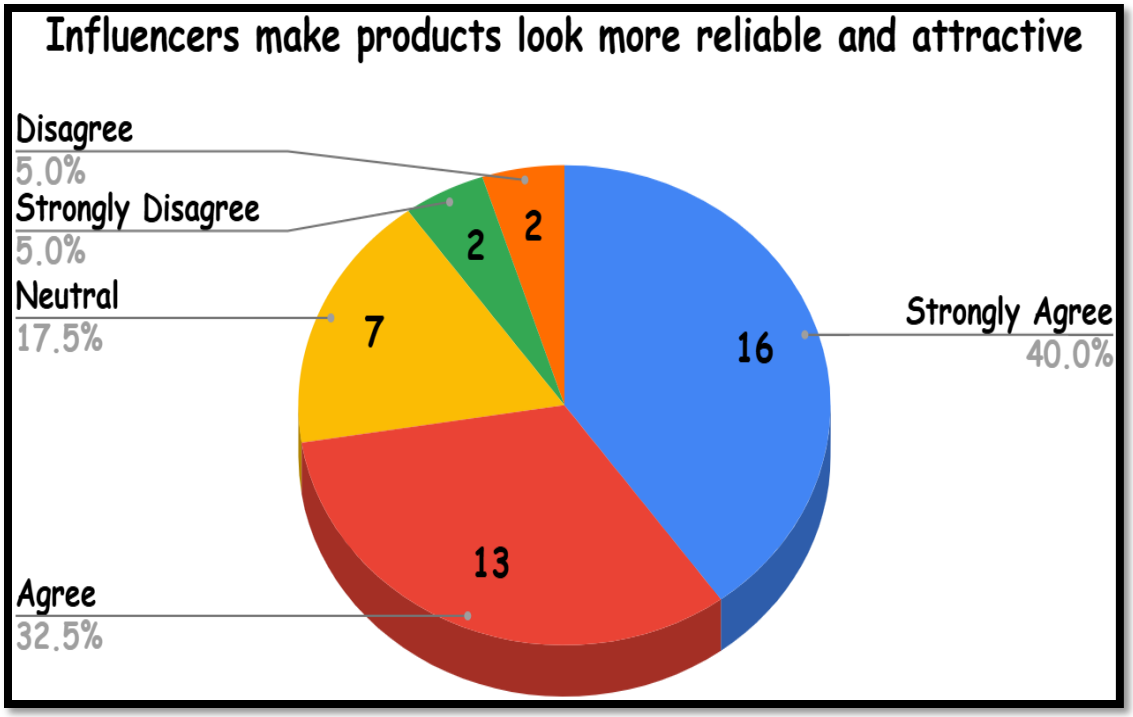
- Influence of Influencers on Product Reliability

Nowadays, influencer presence shapes how companies approach online outreach. Alongside traditional ads, businesses often team up with popular creators so goods show up naturally across feeds - shared via clips, write-ups, or short-form updates seen on apps where people spend time scrolling.

Some people who answered the survey feel trust in a product might grow when an influencer talks about it. Because they show how things work, these voices shape views - telling what they noticed during real-life testing. Their thoughts on performance stick, simply because someone watched them try it out.

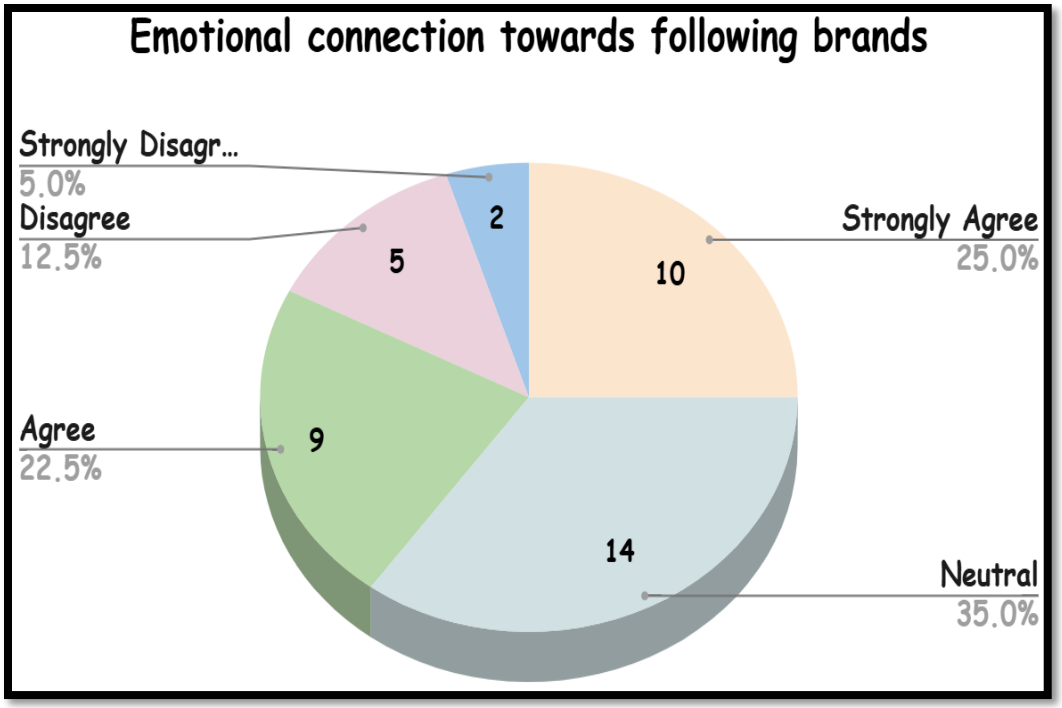
Because they're seen as relatable, influencers tend to build trust over time - so their thoughts on products carry weight. A suggestion from someone familiar feels less like an ad, more like advice from a friend who tried it first. People pay attention when a voice they follow shares what actually worked - or didn't - for them. That sense of firsthand truth makes posts stand out, even in crowded feeds full of polished messages. Instead of scripted lines, there's a story behind the opinion - one that sounds real because it came from daily use.

Because of this shift, trust grows when people see influencers talk about products - making buyers more likely to think seriously about buying.



Emotional Connection with Brands –

These days, who shows up online changes how brands connect with folks. Not just relying on classic commercials, firms link with well-known personalities to weave products into everyday viewing - popping up through videos, posts, or quick snippets tucked inside the platforms users browse daily.Trust in a product could rise after hearing an influencer speak up. Seen trying it themselves, their take carries weight - others notice that effort. Real moments of use get remembered easier than claims made by companies. When someone shares what happened while using it, listeners tend to believe. The way it performs matters more when shown than just described.Trust grows slowly around influencers simply because they seem genuine. A product tip from a known face rarely strikes anyone as advertising; instead, it lands like casual guidance from someone you know. When a follower hears what succeeded - or failed - the message sticks better. Honest takeaways cut through busy streams cluttered with shiny, rehearsed pitches. Behind each viewpoint sits experience built over weeks of routine use, not a single staged moment.Folks start believing more when they spot influencers chatting about items, which nudges shoppers closer to considering a purchase.



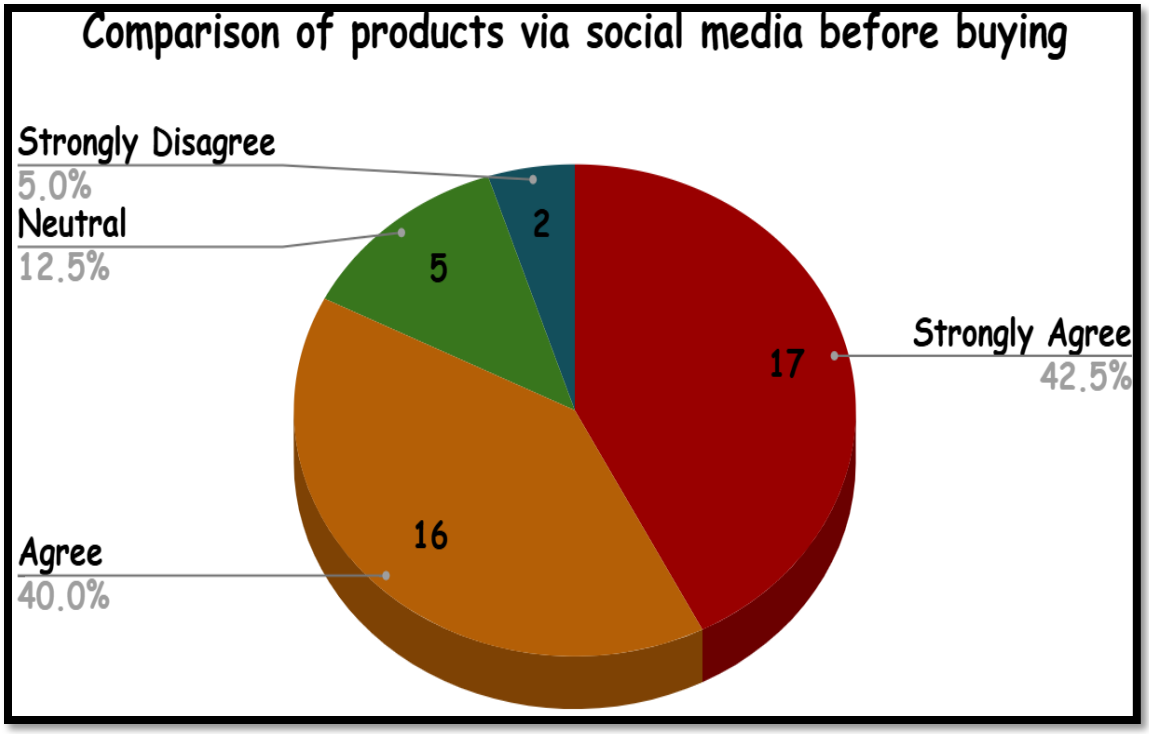
- Product Comparison

What stands out next is how effortlessly people can check one product against another on social media. Looking around first matters to many users, who take time to see what each brand offers through these channels when choosing something to buy.

Not many realize how much time goes into picking a new gadget until they see real people test it out. Because someone else tried it first, doubts start to fade. Picture this: one person shows off flaws another missed entirely. Price tags matter less when durability gets proven live. What looks good online might fail in daily routines. Seeing several versions side by side shifts perspective fast. Experiences add weight where specs feel empty. A shaky camera review beats polished ads every single time.

From behind a screen, shoppers peek at rival items in seconds. One click pulls up options, helping people spot what fits their life. Choices pop faster when details spread online. A quick scroll reveals alternatives, guiding picks without delays.

Folks often spot better buys because scrolling feeds lets them check features side by side. What shows up online shapes choices more than many realize.



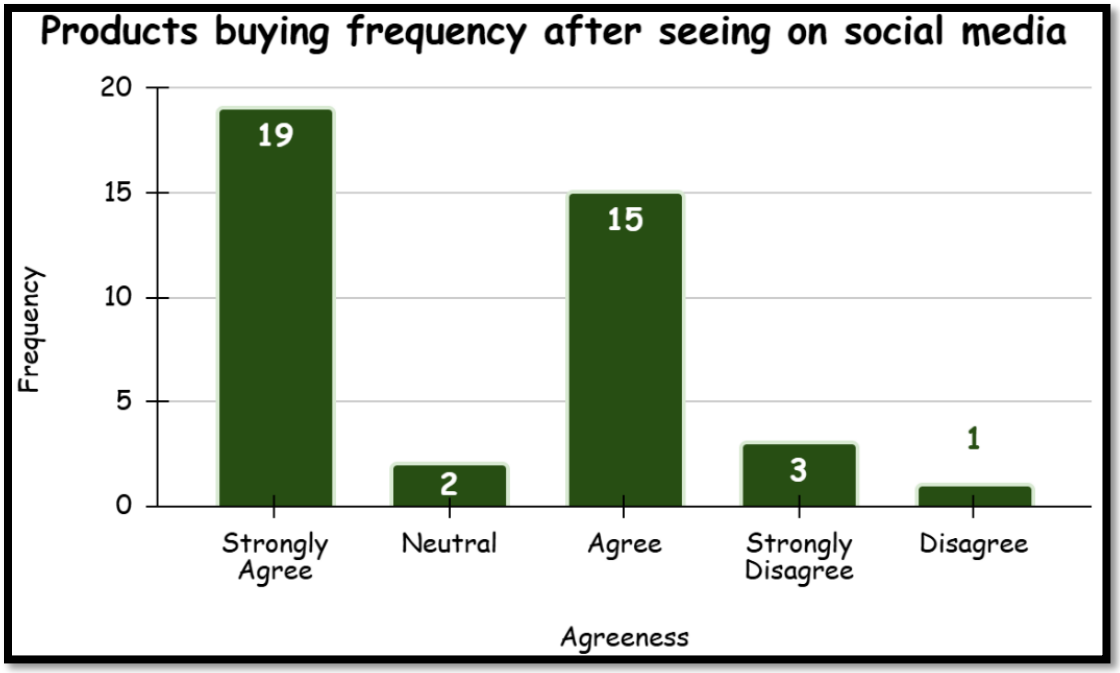
5.5 Key Insights from Data Analysis

- Buying Behaviour

Not every shopper follows the same path when picking what to buy - some browse quietly, others ask around. Responses show many now rely on posts, stories, or comments they see online before deciding. One after another, small digital moments add up to real choices. What shows up on a feed often shapes what ends up in a cart. Behind each click, there is usually a thought shaped by someone else's post.Some people said they usually find out about items via ads on social sites, posts by influencers, or updates from companies. Through these channels, getting details, feedback, looks at how things work becomes simple - helping shoppers grasp what a product does and why it might matter.Over time, spotting a product often on social media makes it feel more recognizable. Because it feels familiar, people might start wondering what it does. Little by little, scrolling feeds turns into a way to learn things before choosing what to buy.

One thing stands clear - social media shapes how people buy stuff. It quietly guides choices

through exposure to new items. Discovery happens more often when scrolling appears part of daily life. Information builds slowly, spread across posts and updates. Decisions form after seeing what others say. Seeing a product online makes it feel familiar later. Awareness grows without loud ads pushing forward. What shows up regularly tends to stick around in minds. Buying follows attention, even if indirectly. Influence isn't always obvious at first glance.



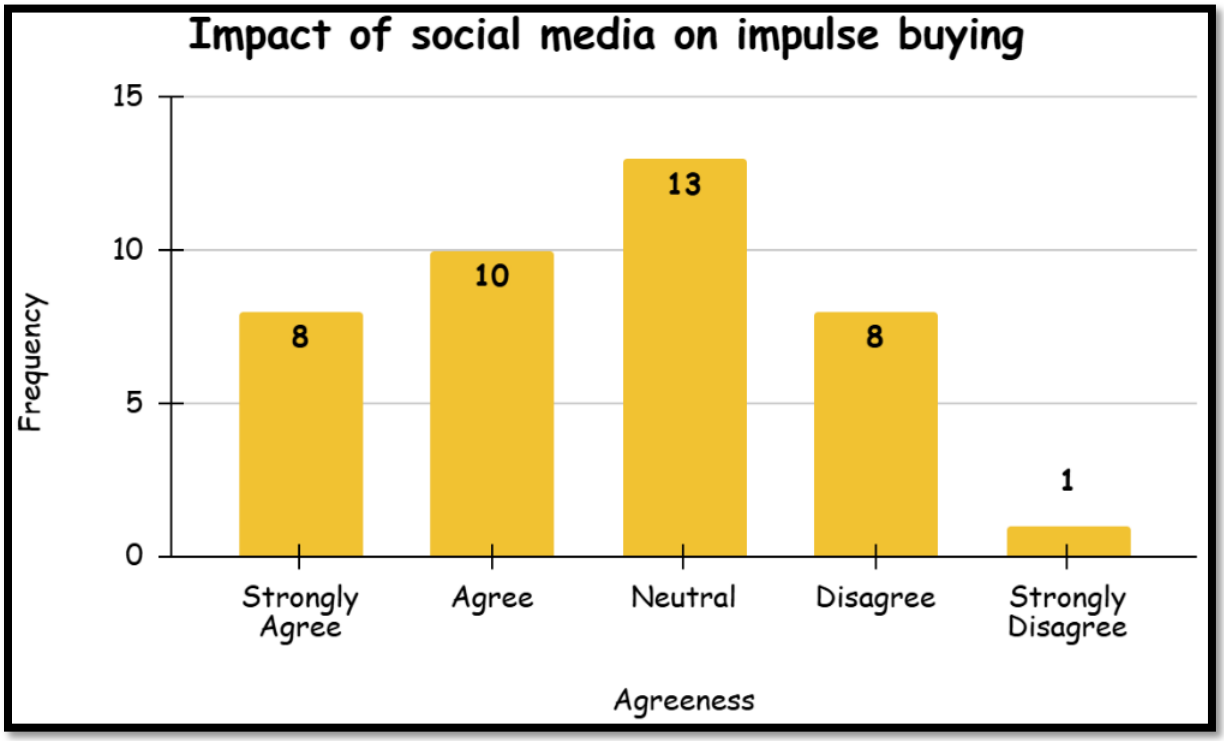
- Impulse Buying

Fueled by quick scrolls through endless feeds, sudden urges to buy pop up more than people expect. Platforms built on likes and shares quietly shape moments where spending feels spontaneous - yet carefully nudged behind the scenes.

Not every reply pointed to careful planning when shopping online. Some people pick things up right away once they spot a deal that catches their eye through posts shared by others. Seeing bold images pop up in feeds tends to spark interest more than plain text ever could. A post from someone familiar - maybe seen before across platforms - adds weight without saying much at all. Time running out on an offer often nudges hesitation aside. Curiosity grows stronger when access feels close but brief.

Pictures or clips showing items in a good light often spark quick buying urges. Because deals appear for just a short time, people tend to act fast. Special prices show up suddenly, which pushes some to decide on the spot.

One reason people act on impulse online ties back to how brands show up in their feeds. Not just when they search for something specific - sudden urges get shaped too. A post seen by chance might shift choices fast. Even unplanned clicks carry weight. What appears casually can nudge behavior without warning. Moments of spontaneity are quietly guided. Attention sticks where it wasn't meant to go.



Brand Preference -

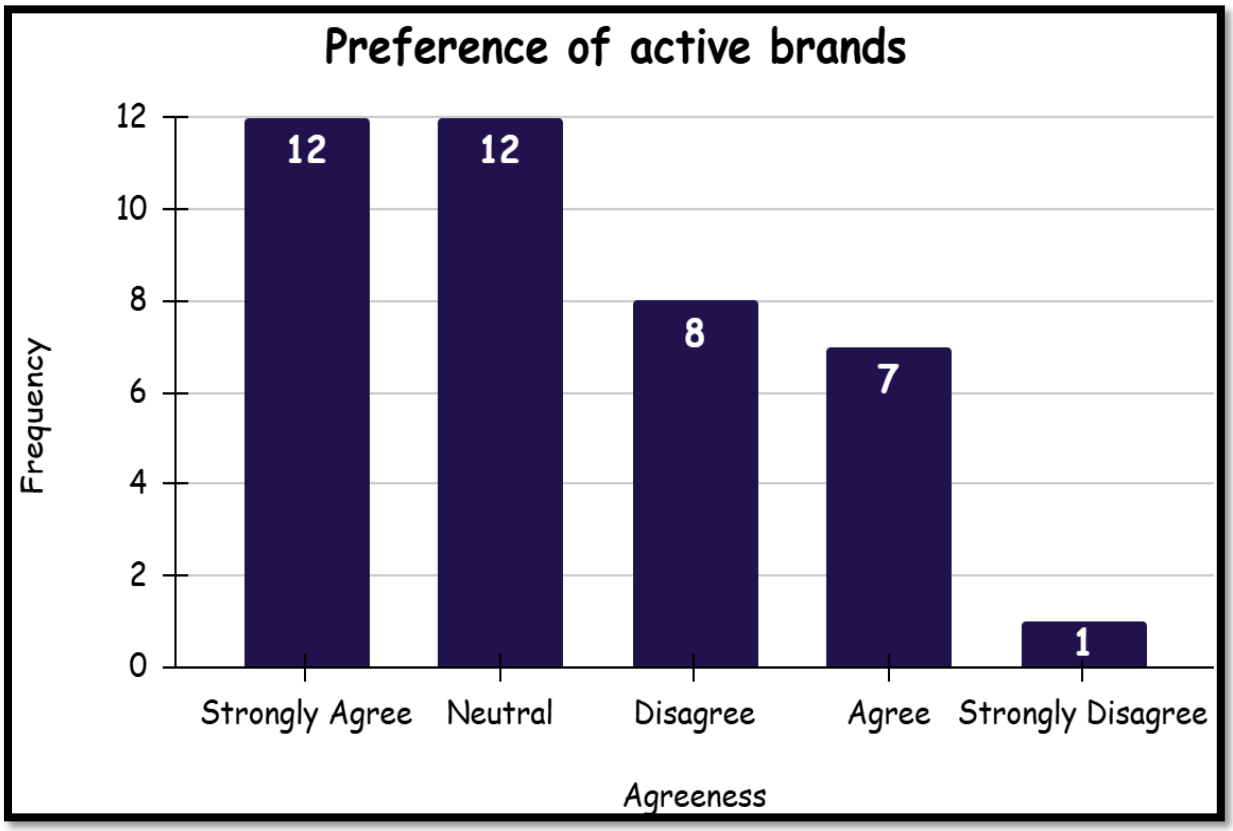
A liking for certain brands often shapes what people decide to buy. Because of constant updates and real conversations online, companies grow closer to customers using social networks.

When people see a brand posting regularly online, they tend to pay closer attention. A quick reply to questions helps build confidence over time. Some folks begin favoring companies that post stories worth reading. Staying visible through regular updates makes a difference without

drawing obvious attention. Getting noticed often ties back to how real a company feels from behind a screen.

Seeing a company's beliefs, how good its products are, together with real user moments, shows up clearly on social platforms. Over time, as people keep engaging with posts or stories, they start recognizing the name more, feeling like they know what it stands for.

This shift often leads people to favor one brand instead of others on the market. Over time, that preference can grow stronger through repeated experience.



Product Recommendation -

When people talk online about what they bought, it shapes how others see those items. A post here, a comment there - these bits add up when someone decides to try something new. Word spreads fast if a review hits home or a friend mentions liking a thing. Thoughts shared out loud often nudge choices without anyone meaning to push hard.

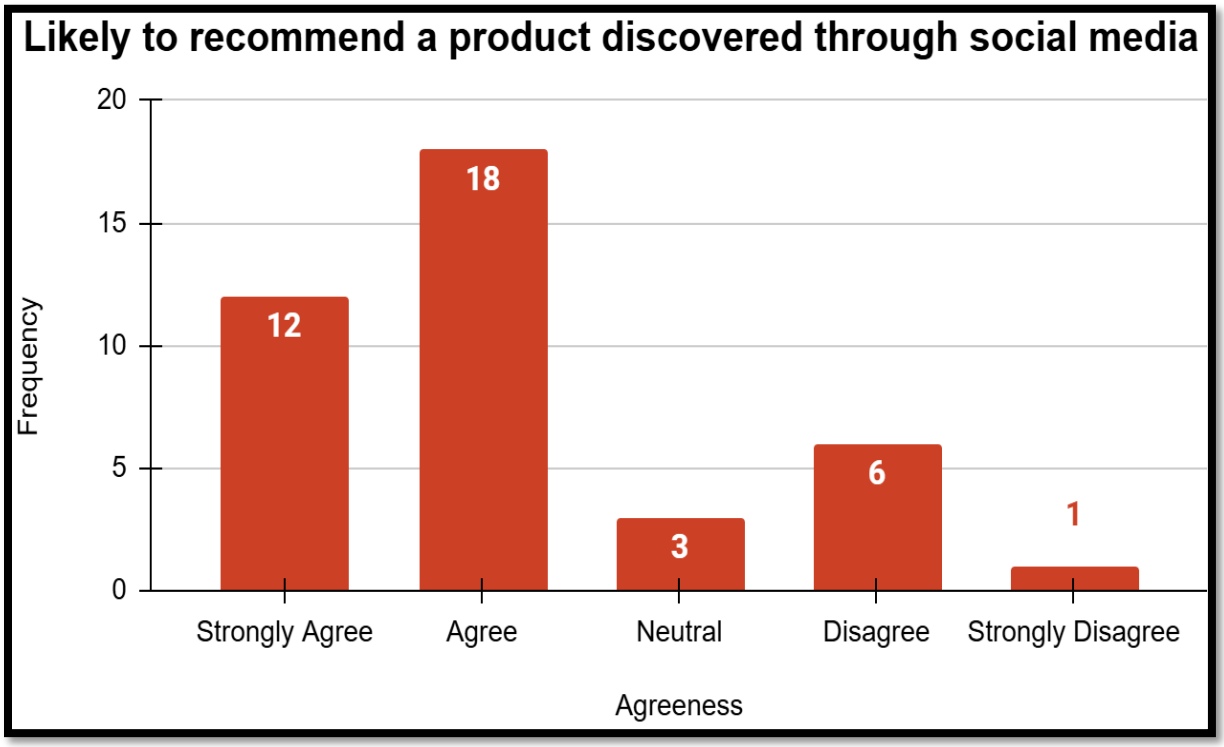
A good experience? That often leads people to tell others about a product. When someone likes what they've tried, word spreads fast online. Platforms like these let thoughts reach many eyes

in seconds. Happy customers tend to speak up where others can see. Reactions grow quickly when shared publicly. What one person says may influence several more without effort.

Messages passed between buyers online shape choices people make when shopping. These digital chats count as modern gossip, spreading opinions fast across screens.

A ripple of good feedback might just tilt how people see a company. Happy customers talking about what they like builds quiet confidence, which draws others in without any push.

So here's how it goes - social platforms quietly pass along what people think about products, nudging opinions without much fanfare. A single post can shift how someone sees a brand, simply by showing up where they already spend time.



5.6 Post purchase behaviour

After buying something, how people feel and act matters. Once they try it out, folks might talk about what happened - especially online. Thoughts spill into comments, reviews pop up where others scroll by. Experiences spread when someone posts, replies, or just reacts. Word travels

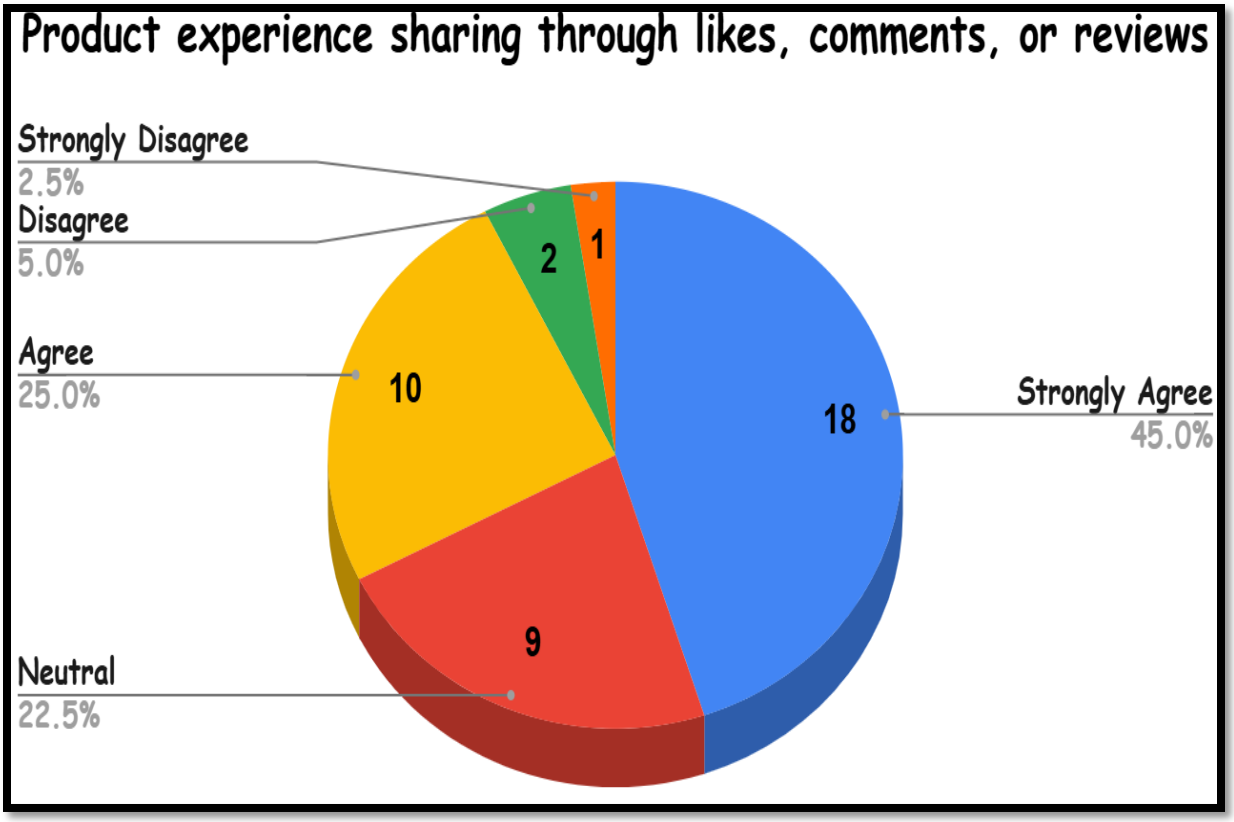
without ads, simply because one person said something real. Opinions ripple outward, quietly shaping who buys next.

Now think about how people talk online after buying something. Voices spread fast when someone shares a happy moment - or a complaint - on digital networks. That sound others hear might shape what they do next time shopping arrives. Listening changes choices without anyone shouting ads. Later parts dig into those shifts sparked by posts, likes, and quick reactions once money is already spent.

- Product Experience Sharing

Now think how fast stories travel once someone buys something. Picture a person typing thoughts online right after unboxing. Some leave notes on websites others scroll past daily. Words spread through reactions people add under photos. A thought pops up here or there when one friend tags another. Moments like these shape what comes next without anyone planning it. Looking at the answers, lots of people seem happy to talk online about things they've tried. If someone likes what they bought, they often write good comments or tell others through posts. Their words give useful hints to shoppers still deciding.

Out in the open, social networks let people talk about what they've used or seen - passing along real reactions. These conversations travel fast, turning into digital chatter that quietly shapes how others see a product.

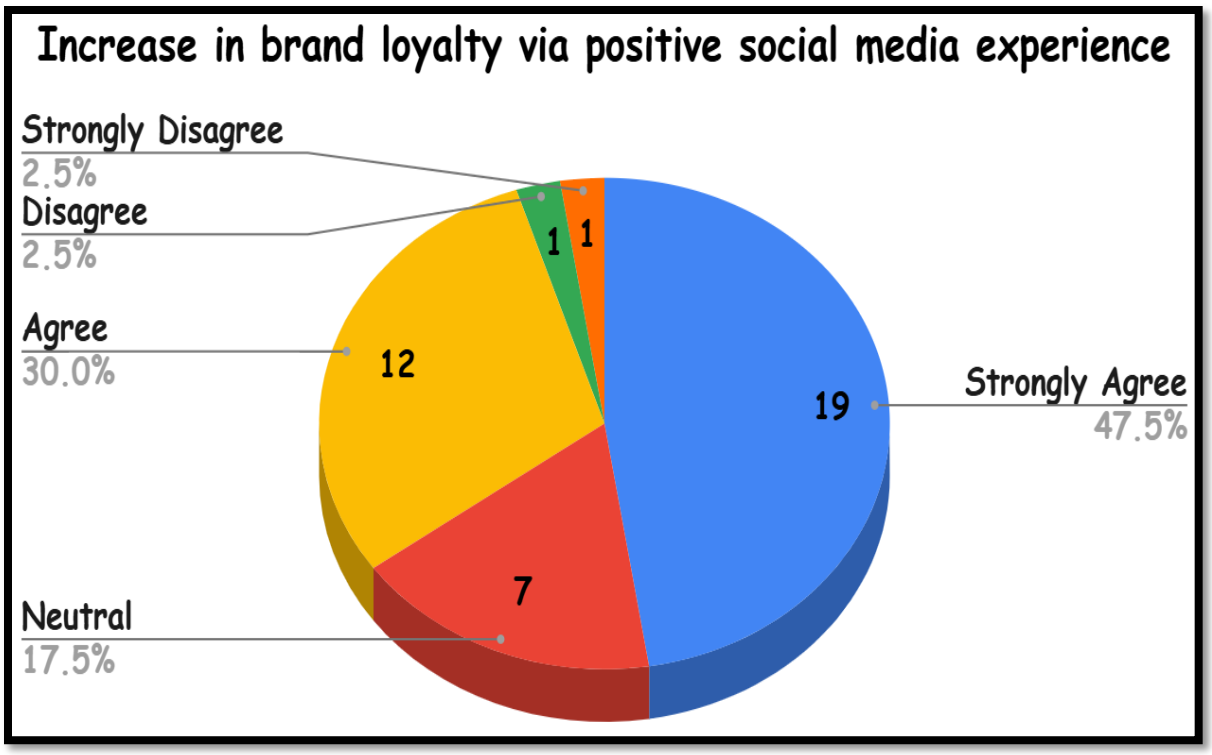


- Increase in Brand Loyalty through Positive Experience

  Imagine how quickly tales move when someone gets a new thing. Right after opening it, they might start tapping out ideas online. A few drop comments on pages folks browse every day. Their messages grow by piggybacking on emoji replies beneath snapshots. Something flickers through the mind each time a name gets mentioned by someone close. These small sparks steer what follows, even though nobody meant for that to happen.

  Surprisingly honest thoughts pop up when folks reflect on purchases. Those who enjoy a product tend to share upbeat feedback online instead. Posts like these become quiet guides for others weighing options. Reactions spread naturally, one mention at a time.

  Folks share their experiences online, speaking up about things they tried or noticed - honest thoughts spreading through feeds. Word moves quickly across platforms, becoming background noise that slowly nudges opinions without fanfare.



- Impact of Negative Reviews on Purchase Decisions

Picture this: stories spread fast once a person unwraps something fresh. Moments later, fingers fly across screens, tossing thoughts into digital spaces. Some leave notes where others scroll without pause. Those words climb forward, riding waves of tiny faces under shared images. A thought stirs when a familiar name slips into conversation. Though never planned, those quiet moments shape what comes next.

Odd how truth slips out when people look back on what they bought. When someone likes an item, their words often rise to the surface online anyway. These notes act like soft signals for those still deciding. Each comment passes along by itself, without push.

People talk about what they've seen or done, tossing real reactions into digital spaces. Through shares and scrolls, those bits travel fast - quietly shaping how others see stuff over time..

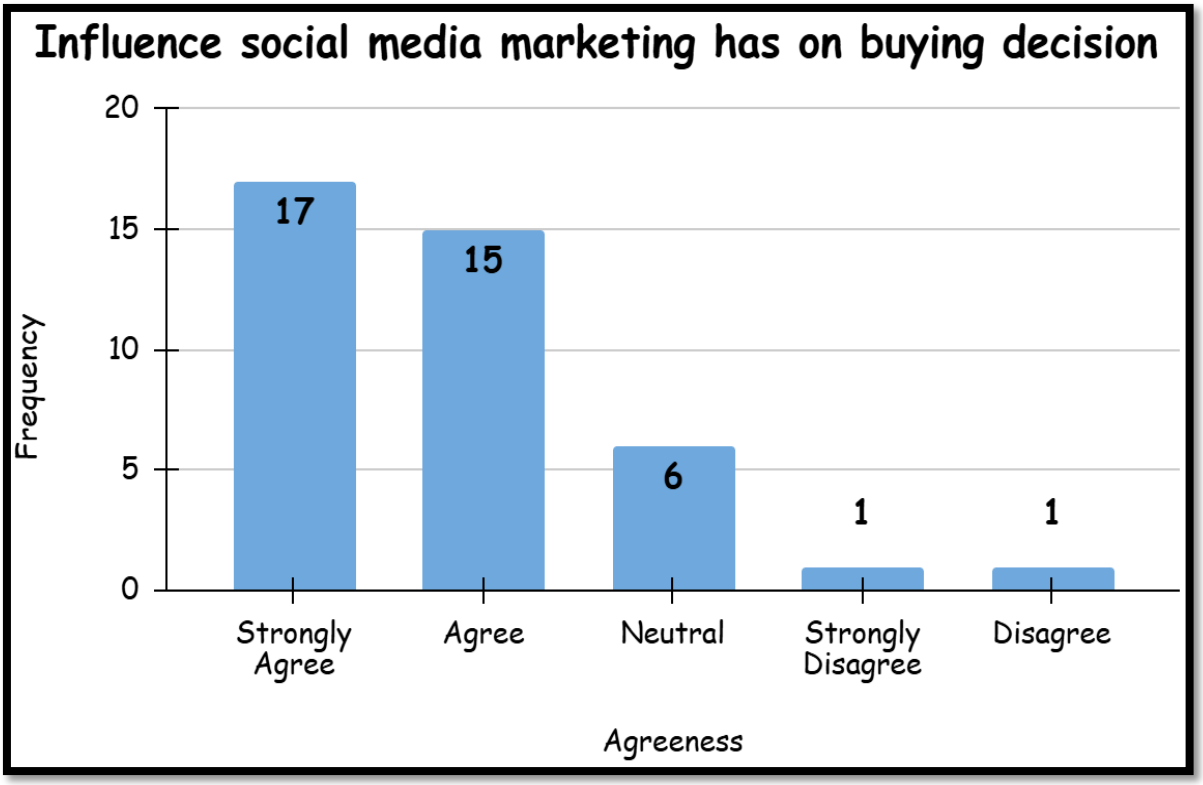
5.7 Overall Impact

- **Influence of Social Media on Future Purchase Behaviour**

A single moment opens up when someone reveals what's new. Right after, hands dart over devices, pushing ideas out online. Not everyone stays to comment - some just keep moving through feeds. Yet those messages drift ahead, lifted by small icons beneath photos passed around. Now it happens - someone says a name you know. Not on purpose, just passing through talk. Still, something shifts inside. Those pauses, unplanned and small, begin to tilt the path ahead.

Truth has a way of showing up when folks think about their purchases. Liked something? Chances are, thoughts spill out onto the web somehow. Those little messages drift toward others who hesitate. One remark moves alone, no urging needed.

Out there, someone posts a moment - raw, unfiltered - and it slips into feeds like rain into soil. As eyes pass over it again and again, meaning begins to shift without announcement. A glance here, a linger there; views bend slowly, shaped by repetition more than force. What spreads isn't always loud - it's just present, often enough to take root.



CHI – SQUARE TEST ANALYSIS

Objective of the Test

The objective of this test is to examine whether gender has any significant relationship with the likelihood of purchasing products after seeing them on social media.

Variables Used

Independent Variable: Gender

Dependent Variable: Buying Behaviour – "I have purchased products after seeing them on social media."

Step 1: Formulation of Hypothesis

- Null Hypothesis (H_0):

There is no significant relationship between gender and purchasing products after seeing them on social media.

- Alternative Hypothesis (H_1):

There is a significant relationship between gender and purchasing products after seeing them on social media.

Step 2: Observed Frequency Table (O)

Gender	**Strongly agree**	**Agree**	**Neutral**	**Disagree**	**Strongly disagree**	**Row total**
Female	10	13	0	0	1	24
Male	9	2	2	1	2	16
Column Total	19	15	2	1	3	40

Total sample size N = 40

Step 3: Expected Frequency Calculation (E)

Formula used:

E = (Row Total X Column Total)/Grand Total

Example Calculation:

For **Female – Strongly Agree**

E = (24X19)/40

E = 11.4

Similarly, expected frequencies are calculated for all cells.

Step 4: Expected Frequency Table (E)

Gender	**Strongly agree**	**Agree**	**Neutral**	**Disagree**	**Strongly disagree**
Female	11.4	9.0	1.2	0.6	1.8
Male	7.6	6.0	0.8	0.4	1.2

Step 5: Chi-Square Formula

$$\chi^2 = \sum \frac{(O-E)^2}{E}$$

Where:

- O = Observed frequency
- E = Expected frequency

Step 6: Chi-Square Calculation Table

Cell	**O**	**E**	**(O−E)² / E**
Female – Strongly Agree	10	11.4	0.17
Female – Agree	13	9.0	1.78
Female – Neutral	0	1.2	1.20
Female – Disagree	0	0.6	0.60
Female – Strongly	1	1.8	0.36

Disagree			
Male – Strongly Agree	9	7.6	0.26
Male – Agree	2	6.0	2.67
Male – Neutral	2	0.8	1.80
Male – Disagree	1	0.4	0.90
Male – Strongly Disagree	2	1.2	0.53

Total Chi-Square Value - $\chi 2=10.27$

Step 7: Degrees of Freedom

Formula:

$$\boldsymbol{df = (r-1)(c-1)}$$

Where:

r = number of rows = 2

c = number of columns = 5

$$df = (2-1)(5-1)$$

$$df = 4$$

Step 8: Decision Rule

At 5% significance level ($\alpha = 0.05$)

Critical value of χ^2 for df = 4 = 9.488

Since

$$10.27 > 9.488$$

The null hypothesis is rejected.

Step 9: Interpretation

The results of the Chi-Square test indicate that gender and purchasing behaviour after seeing products on social media are not independent. This suggests that gender influences the likelihood of consumers purchasing products after exposure to social media marketing.

Independent Sample T-Test Analysis

Objective

The objective of this test is to determine whether male and female respondents differ in their perception that social media helps them discover new products.

Step 1: Hypothesis

- Null Hypothesis (H_0):

There is no significant difference between male and female respondents in their perception that social media helps them discover new products.

- Alternative Hypothesis (H_1):

There is a significant difference between male and female respondents in their perception that social media helps them discover new products.

Step 2: Coding of Responses

Likert scale responses were converted into numerical values:

Responses	**Value**
Strongly Disagree	1
Disagree	2
Neutral	3
Agree	4
Strongly Agree	5

Step 3: Sample Data Summary

Gender	**Sample Size**	**Mean ($\bar{x}$)**	**Standard Deviation (s)**
Female	24	4.33	0.70
Male	16	3.81	0.91

Step 4: Calculation

T-Test Formula

$$t = \frac{\bar{x}_1 - \bar{x}_2}{\sqrt{\frac{s_1^2}{n_1} + \frac{s_2^2}{n_2}}}$$

Calculation

$$t = \frac{4.33 - 3.81}{\sqrt{\frac{0.70^2}{24} + \frac{0.91^2}{16}}}$$

$$t = 1.94$$

Step 5: Degrees of Freedom

$$df = n_1 + n_2 - 2$$

$$df = 38$$

Step 6: Decision Rule

At 5% significance level, the critical t-value = 2.024.

Since:

$$1.94 < 2.024$$

The null hypothesis cannot be rejected.

Step 7: Interpretation

When looking at responses, women showed a bit more tendency to agree that social media aids in finding new items. Yet despite this small gap, results do not show a meaningful distinction between men and women. So it seems both groups view social platforms in much the same way when learning about products.

Step 8: Conclusion

Looking at answers, females were slightly more likely to say social media helps spot fresh things. Even so, that little difference doesn't point to any real divide across genders. Seems like guys and girls see online networks alike when discovering stuff.

CHAPTER 6 – FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

Here’s where things get clear. From that pile of answers, a few trends jumped forward. Not random results - clues pulled straight from how people actually act online. Every piece connects to what we wondered about earlier. When numbers meet purpose, understanding shows up. Surprises pop up even when patterns seem clear. People's actions tend to stray from their words, more often than not. This mismatch holds clues worth noticing. Companies that watch closely might shift how they move forward. Reality refuses to stay organized - it never really has. Yet clarity shows when attention shifts closer. Today’s choices might follow where proof gently points.

Graphs and numbers emerged straight from survey replies. Answers given show the role social media plays in decisions made before someone buys. After a purchase, reactions follow paths influenced by those same digital spaces. Reactions after buying link back to interactions seen online.

6.1 Findings

Looking at the gathered information showed a few clear results about how social media shapes what people buy. What stands out is how ads, customer feedback, posts by popular users, along with interaction online shift choices buyers make.

Social Media As A Source For Product Details

Finding number one stands out - people now turn to social media just as much as any store guide when looking up items. Scrolling through feeds often leads users straight into spotting something fresh on the market.

Now picture scrolling past a quick clip showing someone using a new gadget - suddenly you're aware of it. Sites like Instagram or YouTube give companies space to show what they sell, often without feeling like ads. A short video plays, maybe during a break in your day, something catches the eye. Reels or clips unfold naturally, slipping into moments people spend online. Instead of reading paragraphs, folks see items being used, tried out, talked about. Discovery happens quietly, almost by accident. Posts pop up where attention already lands, making unfamiliar things start to feel known.

Now think about how folks learn what's out there. Turns out, scrolling feeds changed everything. Awareness pops up differently these days thanks to posts people see. Not ads. Not stores. Just shared clips and updates nudging choices without saying buy. The moment someone notices something new usually starts online now. That shift? It quietly rewired attention.

- Social Media Advertisements Help Consumers Learn About Products
- Facts came together slowly, pointing one way: buying habits bend under social media's reach. Surprisingly visible? The push of adverts, mixed with reviews that spread fast. Voices of well-known posters matter too, their words folding into decisions. Online chatter joins in, quietly steering which options feel right.
-
- Social Media As A Source For Product Details
- Fresh finds pop up where you least expect - right between posts, right in the feed. Number one on the list? Social platforms pull even with printed guides these days. Spotting what's new happens mid-scroll, almost by accident. A post slips in, catches attention, shifts intent.
- Imagine flicking through your feed when a brief scene pops up - someone testing a fresh device.

That moment shifts attention, plants an idea. Platforms such as YouTube or Instagram let brands slip in quietly, blending into the usual flow. Not loud announcements, just glimpses woven between regular posts. A snippet runs while you pause, scroll, sip coffee - timing matters more than force. These snippets roll by like stories among friends, casual but clear. Watching beats reading every time, especially when hands move across tools, faces react, voices comment. Products appear mid-action, not boxed on shelves. You notice because it feels real, not staged. Less push, more presence. Familiarity begins in silence, nearly without notice. Out of nowhere, messages appear right where eyes tend to rest, turning what's strange into something recognized.

- Picture how people find stuff today. Scrolling reshapes it all, really. What catches eyes tends to begin on screens, not billboards. A friend shares, then another - that ripple spreads ideas. No shouting sales pitches needed. Simple videos or notes float by, planting seeds. Notice comes first through glimpses in motion. This quiet move online? It shifted where focus lands, almost unseen.

Influencer Marketing Plays a Significant Role

- Slowly, pieces added up - clearer now how shopping choices shift when screens glow. Not hard to spot, really: ads pile on, riding waves of quick-shared opinions. Famous voices chime in, nudging picks without loud claims. Murmurs across platforms slip underneath, shaping what seems like a good fit.
-
- Social Media As A Source For Product Details
- Something different shows up out of nowhere - tucked between updates, sitting in your stream. Top of the pile now: social sites stand firm next to paper booklets. You notice the latest stuff while glancing through, nearly without meaning to. One message slides into view, grabs hold, changes direction.

- A quick clip catches your eye mid-scroll - hands moving across a new gadget. This small moment grabs focus, leaves a trace. On places like YouTube or Instagram, companies move softly, fitting in without standing out. Instead of shouts, they offer quiet peeks tucked among daily updates. While you stop to scroll or take a drink, something small keeps moving - rhythm counts more than power. Stories unfold like chats between people who know each other, relaxed yet sharp. Seeing works better than words, particularly when fingers touch devices, expressions shift, talk overlaps. Items show up mid-use, never sealed in packaging. It registers because it seems genuine, not arranged. Not so much pressure, just being there. Quiet moments plant the first seeds of knowing. Without warning, words show up just where sight settles, making odd things feel known.
- Imagine where folks spot things now. Through swipes, everything shifts, slowly. First sight? Often pixels, never posters. One pal passes it along, then someone else follows - waves like these carry thoughts forward. Floating past without noise - just quick clips or short thoughts. Glimpses catch eyes before full attention does. Motion speaks early here. A shift happened below sight level, changing what holds gaze online.
-

Social Media Lets Shoppers See Product Differences

Now picture someone scrolling late at night, eyes scanning clips of gadgets side by side. One video stacks features neatly while another spills messy truths from real hands. Opinions pile up, some loud, others quiet, yet each nudges the choice forward. A single comment might tip the scale more than an ad ever could.

Choosing a brand becomes clearer when people see how each one lines up against their personal requirements. A closer look reveals what stands out - or falls short - in everyday use.

Because of this shift, platforms online shape how people pick what to buy.

Good experiences make people stick with brands

Happy users stick around longer. A good experience nudges people to believe in the name behind the item. That belief often shows up at checkout - again and again. Trust builds quietly, then reveals itself when choices get made.

Beyond just posting updates, social channels help companies stay in touch using shared content that keeps conversations going. Through regular messages and behind-the-scenes looks, businesses keep audiences engaged without needing constant purchases to hold attention.

When people bond with a brand on social media, loyalty often follows. That connection? It tends to spark lasting support down the line. Moments of engagement online can quietly shape future choices. A simple interaction today might echo in tomorrow's decisions. Feeling close to a company shows up later - in repeat purchases, yes, but also in quiet advocacy. The digital touchpoint becomes a kind of anchor. Not always loud - just present.

Customer feedback after buying affects others' choices

Folks tend to post about products they bought once the deal is done. Because of this habit, chatter spreads online - shaping how others choose what to buy.

Good moments often spark word of mouth, yet poor ones tend to spread just as fast. A happy customer might share freely, whereas someone upset is likely to warn others. Joy sticks around in conversations; frustration does too, but louder. People remember how they felt, then pass it on - kindness gets mentioned, discomfort even more so

A wave of negative feedback shapes how others see a product. That shift in view sways shoppers still deciding whether to buy it.

A single comment after buying something can ripple through platforms fast. Reputation shifts quietly, shaped by what people say online afterwards

6.2 Conclusion

Social Media Shows How Products Differ

Last night, fingers swipe through dim light, jumping between gadget videos. In one, specs line up clean and tidy. The next shows fingerprints on screens, voices arguing fit and function. Thoughts gather slowly - some shout, some murmur - but every word shifts the balance a little. That offhand remark below? It weighs heavier than any polished promotion.

What matters most often shows up only after using something awhile. Picking a name gets easier once real needs meet real performance.

Now things move differently, since web spaces nudge decisions without shouting. Day after day, a quiet stream of borrowed moments shifts what feels right to grab.

Good experiences make people stick with brands

People who enjoy using something tend to stay. When things go smoothly, they start connecting the product with the maker. This connection appears each time they decide to buy. Slowly, confidence grows without much noise. It becomes clear exactly when picking one option over another.

Nowhere else do brands find such steady ground as they do when slipping into chats through posts others pass along. Not only does sharing glimpses outside polished ads build familiarity, but it also invites interest without demanding a sale every time. Quiet moments between big announcements often speak loudest. Instead of pushing products, some simply show up, day after day, with bits people want to pass on. Even small touches - like how a team laughs during setup - can stick longer than slogans ever did.

Later on, trust grows when folks feel tied to a name they see online. This kind of link usually leads to sticking around longer. Behind every click or comment sits a small moment that matters. Over time, those bits add up without much noise. What feels minor now - like a like or reply - can guide what someone buys later. Even silence speaks; choosing one product again and again tells its own story. A screen sits quietly in the corner of daily life. It doesn't shout - just stays there, steady.

Customer feedback after buying affects others' choices

Once folks buy something, posts start popping up across the web. That ripple effect kicks off when one person shares, then another picks it up. Conversations grow quietly, shifting how people see their options later on. The pattern repeats without much thought behind it - just someone saying what they got. Those small moments pile up where choices are made differently than before.

Moments that go well? They travel through talk. Rough experiences do the same, though. Someone pleased may speak up without being asked, while a person left fuming will point out what went wrong. Laughter lingers when stories are told; irritation tags along - shouting, really. Feelings stick, then shift into words shared later - care slips out casually, unease forces its way forward

A single bad review can color the whole picture people carry in their minds. When opinions tilt sour, hesitation grows among those standing at the edge of a purchase.

One remark posted following a purchase might spread quicker than expected across sites.

6.3 Recommendations

Based on the findings of the study, several recommendations can be made for businesses that want to improve their social media marketing strategies and better influence consumer behaviour.

Focusing on Social Media That Connects

Starting fresh helps brands stand out online when they post lively images and clips. A quick video might catch someone's eye more than plain text ever could. Posts that ask questions pull people in, making them want to respond. Showing how something works builds curiosity without saying much at all. Reels often spread faster, reaching folks who weren't even looking. Eye-catching updates keep followers coming back, almost like a habit.

Out here, where every brand fights for attention, fresh ideas mixed with clear facts make a real difference. A unique voice paired with useful insights cuts through the noise without trying too hard. When stories feel both imaginative and honest, they stick around longer than most. The online space gets crowded fast - originality combined with clarity gives some companies an edge others miss.

·Collaborate with Influencers

When it comes to shaping how people see a brand, working with the right voices matters. Those individuals already trusted by certain groups bring familiarity through everyday moments. A product shared this way feels less like an ad, more like a suggestion from someone familiar. Matching values between company and communicator makes that connection smoother. Trust builds slowly - yet one genuine moment online can shift attention fast.

Folks tend to believe what they see when someone real talks about using something. Because of

that, a viewer might start thinking - maybe I should try it too.

Get customer reviews and feedback

Word from users spreads fast when companies ask them to post thoughts online. A happy comment here, a shared moment there - trust grows without loud claims. Real talk in public spaces makes strangers nod instead of scroll past. When people see others speak up, they start believing it might be worth trying too. Honest reactions stay longer than ads ever could.

When customers speak up, firms pay attention - fixing issues fast builds trust. A complaint handled well turns frustration into loyalty. Replies matter most when emotions run high; silence hurts more than words ever could. Facing criticism head-on shows strength, not weakness. How a business answers shapes how it's seen. Mistakes happen, but recovery defines reputation.

Target Ads by Audience Traits

Folks scrolling online can be pinpointed by what they like, where they live, or how they act - thanks to tools built into social sites. Reaching a particular group isn’t guesswork anymore; choices about age or habits make it precise.

When firms aim ads, picking the right audience matters. Hitting spots where interest already lives makes messages land better. Tools help find those people without guessing. Reaching out becomes smarter when guided by data instead of hope. Matching customers to offers grows easier with precise filters. Ads stand a chance only if they show up near curious eyes. Right timing? Part luck. Right targeting? Less so.

Ads meant for specific people feel more personal, so they tend to shape buying choices better. What matters is how well the message fits who sees it, making a difference without feeling forced.

Maintain consistent brand communication

Every now and then, brands reach out by posting something new or sharing small updates. A

reply here or there - to questions, remarks, or private notes - builds trust over time. Talking back when someone speaks up makes people feel noticed. Regular contact turns distant buyers into familiar faces.

Folks begin to rely on the company when they feel heard, slowly tying them closer through repeated contact. Over time, that connection turns into a quiet preference - showing up again not out of habit but recognition.

·Monitor Online Reputation

Every time someone posts a review, it quietly shapes what others decide to buy. When people talk about a brand online, those words stick around longer than expected. Listening closely becomes necessary once reactions start showing up across sites. Replies matter most when frustration appears early. Fixing problems fast helps keep trust alive. What gets said publicly often spreads faster than planned. Staying alert means catching issues before they grow larger.

A strong presence on the web starts with how people see you. When responses are thoughtful, trust builds slowly. Seen in a good light, interest grows without effort. Reactions matter most when they come from real moments. What others say sticks longer than ads ever could.

Attractive Promotions and Discounts

A sudden drop in price might catch someone's eye mid-scroll. When a deal feels urgent, clicks tend to follow. Posts on apps where people already spend time often spread further. A timer ticking down adds pressure without saying much. Screens light up faster when savings appear out of nowhere.

Final Summary of the Chapter

This chapter laid out the main outcomes of the study, showing how social media affects what people buy. Through its reach, online networks shift how consumers see products, feel about brands, yet also guide their choices without clear prompting. What stands out is how deeply these tools now shape attention, opinions, still drive actual spending.

One thing becomes clear from the research - companies need smart social media plans just to keep up these days. When they talk with people who buy their products, ask what works, then share stories worth reading, trust grows slowly. That connection? It changes how well marketing actually performs over time.

Managerial Implications of the Study

Fashion retailers can learn a lot from what this study uncovered. As social networks grow fast, so does how people shop online. Mobile tech is spreading quickly; because of that, brands need new ways to connect with buyers. Shifting habits mean old ads might not work anymore. Instead of sticking to past methods, firms could try fresher approaches. What worked last year may already feel outdated now.

It starts with awareness: companies need to see social media as more than messaging - it shapes how people choose what to buy. People run into new items while scrolling, often through ads or posts by influencers and brands. Because of this flow, content has to stand out, using strong visuals and moments that pull viewers in. Attention doesn’t come easily; it must be earned with something worth stopping for.

Now think about how people check what others say online before buying something. Word travels fast when someone shares a real experience. Happy buyers often skip leaving comments, even though those notes matter a lot. Picture your last purchase - didn’t you search for honest thoughts first? When more voices back a product, strangers start seeing it as trustworthy. Reactions add up quietly, shaping choices without flashy ads. A single story from a regular user can tip the balance where facts fall short.

One thing to consider is how brands work with influencers. Findings suggest these partnerships can shape what people think about a product

Folks tend to weigh a product's worth more heavily when someone they recognize backs it. Yet picking the right face for that role matters - mismatched beliefs or audiences muddy the message. When partnerships feel real, not rehearsed, people listen differently. Trust builds slowly, but one genuine moment speeds it up. A brand seen through honest eyes often lands better.

These days, how people shop often ties back to being able to use phones easily. Because so many folks scroll through social platforms on their handhelds, companies need sites, apps, and ads that work well on smaller screens. When moving around a brand feels effortless on a phone, shoppers tend to stay happier - which might just bring them back again.

Building lasting ties matters more than chasing quick sales. Regular chats on social platforms help firms stay close to buyers. Replying to feedback keeps the conversation going. Sharing helpful updates strengthens trust over time. Connections grow when brands show up consistently.

Firms must rethink how they connect with customers, blending neighborhood reach with smartphone ease plus online interaction. A mix like this pushes brands beyond old-school ads into real-time conversations where people already spend time. Matching messages to specific places matters just as much as timing them right on devices always within arm's reach. Reaching

someone nearby often works better when the message feels personal, not broadcasted. Jumping into trending discussions helps visibility grow without forced promotion. Local events gain traction when shared socially before being pushed through mobile alerts. Customers respond more when offers show up exactly where they are, not just when they're expected.

CHAPTER 7 – LIMITATIONS AND SCOPE OF FUTURE RESEARCH

7.1 Limitations of the Study

Although this research provides useful insights into the influence of social media on consumer buying behaviour, certain limitations should be acknowledged.

- Small Sample Size:

  One of the main limitations of this study is the relatively small sample size. The research was conducted using responses from 40 participants, which may not fully represent the behaviour of the entire population. A larger sample size could provide more accurate and generalizable results.

- Limited geographical scope:

  Another limitation relates to the geographical scope of the research. The study was limited to respondents from the Delhi NCR region, including Delhi, Noida, and Ghaziabad. Consumer behaviour may vary in other parts of India due to differences in culture, income levels, and access to digital technology. Therefore, the findings of this research may not fully reflect the behaviour of consumers in rural areas or other regions.

- Limited time:

  Time constraints also posed a limitation for the study. The research had to be completed within a limited academic timeline, which restricted the duration available for data collection and analysis. A longer research period could allow for more detailed investigation of consumer behaviour.

- Reliance on primary data leading to inaccuracy:

  Additionally, the study relied primarily on self-reported data collected through questionnaires. Some respondents may have provided answers based on their perceptions rather than their actual behaviour. This may lead to minor inaccuracies in the data.

- Rapid change in strategies:

  Another limitation is that social media platforms and digital marketing strategies change very rapidly. New platforms, technologies, and marketing techniques are continuously emerging. As a result, consumer behaviour in the digital environment may evolve over time.

  Despite these limitations, the research still provides valuable insights into how social media marketing influences consumer purchasing decisions.

7.2 Scope for Future Research

- Larger Sample Size

  Future research can be conducted with a larger number of respondents. A bigger sample size would provide more reliable results and help in understanding consumer behaviour more accurately across different groups of people.

- Wider Geographic Coverage

  This study focused on a limited geographic area. Future studies can include respondents from different cities, states, or even different countries to compare how social media influences consumer behaviour in various regions.

- Comparative Study of Different Social Media Platforms

  Further research can compare the effectiveness of different social media platforms such as Instagram, YouTube, Facebook, and emerging platforms. This would help identify which

platform has the strongest influence on consumer buying decisions.

- Industry-Specific Research

  Future studies can focus on specific industries such as electronics, beauty products, food delivery, or travel services. Consumer behaviour may vary depending on the type of product being marketed on social media.

- Role of Emerging Technologies

  Researchers can also examine the impact of emerging technologies such as artificial intelligence, augmented reality, and virtual shopping experiences on consumer behaviour in online retail environments.

- Long-Term Impact of Social Media Marketing

  Future research can explore the long-term effects of social media marketing on brand loyalty, customer retention, and repeat purchasing behaviour.

- Influence of Cultural and Social Factors

  Further studies can analyse how cultural background, lifestyle, and social values influence the way consumers respond to social media marketing.

- Qualitative Research Approaches

  Future researchers can conduct interviews, focus group discussions, or case studies to gain deeper insights into consumer emotions, motivations, and perceptions related to social media marketing.

APPENDIX

SoLoMo Commerce

* Indicates required question

Name *

Your answer

Age *

- 18–21
- 22–25
- 26–30
- 31-34
- 35-39
- Above 40

Gender *

- Male
- Female
- Prefer not to say

Education Level *

- School
- Undergraduate
- Postgraduate
- Other

Monthly Personal Income *

- ◯ No income
- ◯ Below ₹15,000
- ◯ ₹15,000 – ₹30,000
- ◯ ₹30,000 – ₹50,000
- ◯ Above ₹50,000

How much time do you spend on social media daily? *

- ◯ Limited to 0 hours
- ◯ Option 2
- ◯ 1–2 hours
- ◯ 2–4 hours
- ◯ More than 4 hours

Which social media platforms do you actively use? *

- ☐ Instagram
- ☐ Facebook
- ☐ Threads
- ☐ YouTube
- ☐ Others
- ☐ I don't use social media

Which platform influences your buying decisions the most? *

- ☐ Instagram
- ☐ Facebook
- ☐ Threads
- ☐ None

Exposure to Social media marketing *

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I frequently see advertisements for products on social media.	○	○	○	○	○
Influencer promotions grab my attention more than traditional ads.	○	○	○	○	○
Product reels and stories are more engaging than normal posts.	○	○	○	○	○
Discounts and offers on social media attract me to products.	○	○	○	○	○

Consumer perception & attitude *

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
Social media ads provide useful information about products.	○	○	○	○	○
Reviews and comments on social media increase my trust in a brand.	○	○	○	○	○
Influencers make products look more reliable and attractive.	○	○	○	○	○
I feel emotionally connected to brands I follow on social media.	○	○	○	○	○
Social media helps me compare products before buying.	○	○	○	○	○

Buying Behavior *

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I have purchased products after seeing them on social media.	○	○	○	○	○
Social media influences my impulse buying behaviour.	○	○	○	○	○
I prefer brands that are active on social media platforms.	○	○	○	○	○
I am likely to recommend a product I discovered through social media.	○	○	○	○	○

Post purchase behavior *

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
I share my product experience through likes, comments, or reviews.	○	○	○	○	○
Positive social media experience increases my brand loyalty.	○	○	○	○	○
Negative reviews on social media stop me from buying a product.	○	○	○	○	○

Overall Impact *

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree
Overall, social media marketing influences my buying decisions.	○	○	○	○	○
